

SOLO SCENARIO BOOK

Originally Compiled by Kin Hassar (Version 1,2). Updated 6/20/20 by Chuck Williamson (Version 3).

This scenario book has three parts. First, there are some general principles that apply to all scenarios, or to a subcategory of scenarios (like cooperative scenarios). In the second part, there are optional variant rules you can use for your game. The third part contains descriptions of the scenarios.

1. GENERAL PRINCIPLES

MAP SHAPE

In each scenario description, there is a recommended map shape for the various number of players allowed in that scenario.

Wedge Map

This shape uses starting tile A. It is similar to the one in starting scenario, with one extra rule:

- Core (brown) tiles cannot be added to the coastline. (i.e. to the leftmost and rightmost lane of tiles).

The map starts tight, but then opens relatively quickly, and soon it can be wide. The extra rule prevents the Cities being too far from one another.

This map is most suitable for 2 or 3 players. Because of its narrow start, it is not recommended if the players are of different levels of experience: With 3 players, an inexperienced player may get blocked at the start. With 4 players, this risk gets even higher and harder to avoid.

Fully Open Map

A fully open map uses starting tile B, and you deal three tiles adjacent to it at the start. The coastline opens out in a much wider angle here. However, it does not open forever — the map can have a maximum of 5 parallel columns of tiles. Imagine the coastline in each direction breaks after you add two tiles to the starting tile. See the picture.

A fully open map is suitable for a comfortable four player game. For fewer players, it is a bit too vast, and there may not be enough interaction in later phases of the game.

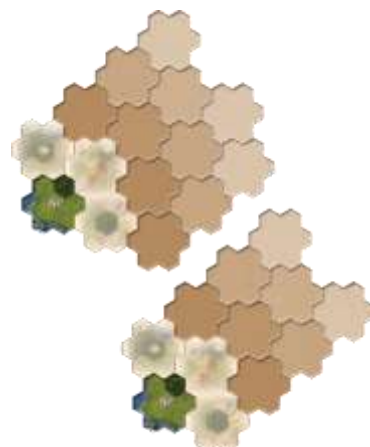

Open Map Limited to 4 or 3 Columns

This is the same shape, except the map is limited to 4 or 3 columns only. (With 4 columns, it opens more to the right than to the left). See the pictures.

The 4 column map is suitable either for a 3 player game, if you do not want the start to be too crowded, or for a 4 player game, if you want more interaction between the players.

Similarly, the 3 column map is suitable for a 2-3 player game, if you want the interaction to be tight during the entire game. Note: If you play with 3 or 4 players here, someone could rush forward and the ones that stay behind may not have enough interesting places to explore and conquer.

SOLO SCENARIO

Spells

In a Solo game, remove the four competitive Spells (numbered 17-20) from the Spell deck you will not use them.

Dummy Player

In the Mage Knight Board Game, when playing solo the pace of the game is set by the automated Dummy player.

At the start of the game:

- After the player chooses his Hero, randomly choose one of the Heroes that is not in the game as a Dummy player Hero. You only need his Hero card, his Round Order token, and his starting deck of 16 Basic Action cards.
- Take a look at his Hero card. At the bottom, there are three colored dots (for example Goldyx has green, green and blue). Give three crystals of these colors (one for each dot) to the Dummy player's Inventory.

Note: this applies for the Dummy player only. Other characters start with no crystals.

- Shuffle that Hero's Deed deck, and the Dummy player is ready to go.

When picking Tactics:

- See the Scenario description for how the Dummy player chooses his Tactic card at the start of each Round.
- He does not benefit from the Tactic, it just determines when he plays in Round Order: Arrange the Round Order tokens by the Tactic numbers, as usual.

When it is the Dummy player's turn:

- If his Deed deck is empty, he announces the End of the Round. Other players have one more turn, and the Round is over.
- If his Deed deck is not empty, flip over three cards from his Deed deck and put them in his discard pile. Check the color of the last flipped card (topmost card of the discard pile):

- If the Dummy player has no crystals of that color in his Inventory, his turn is over.
- If he has any crystals of that color, flip as many additional cards as he has crystals of that color. Then, his turn is over (the color of the additionally flipped card(s) does not matter).

- Note: If there are not enough cards in his Deed deck, flip as many as you can. On his next turn, the Dummy player announces End of the Round.

When preparing a new Round:

- When removing the lowest card from the Advanced Action offer, add this card to the Dummy player's deck instead. Then shuffle the Dummy player's deck.
- When removing the lowest card from the Spell offer, put it to the bottom of the Spells deck, as usual. In addition, add one crystal of the same color as that Spell card to the Dummy player's Inventory. Contrary to real players, he can have more than 3 crystals of the same color.

Note 1: The Dummy player does not play too aggressively, so you have enough time to play efficiently. Sometimes, though, the random flips may mean that he goes through his deck much faster. Watch the Dummy player's deck to adjust your tempo!

Note 2: You have a slight control over the Dummy player's deck and crystals. It may be advantageous not to let him get crystals and cards of the same color.

Skills

In a Solo game, you also use the set of Skills belonging to the Dummy player's Hero, except the competitive Skill. Shuffle them and put them face down next to his Hero card.

Every time your Hero has gained a Skill token, also reveal one Skill of the Dummy player, and put it into

the Common Skill offer – it is available to you the next time you may gain a Skill token. If you choose such a Skill from the Common Skill offer, you have to take the lowest Advanced Action card, as with usual Level Up rules.

Scoring

In a solo game your final score is calculated by taking your Fame at the end of the game and adding the Achievements as follows:

- Advanced Actions: +1 per Advanced Action card in your deck
- Spells: +2 per Spell card in your deck
- Artifacts: +2 per Artifact card in your deck
- Crystals: Number of crystals in your inventory divided by 2 (rounded down)

- Unwounded Units: Sum of the Unwounded Units levels
- Wounded Units: Sum of the Wounded Units levels divided by 2 (rounded down)
- Conquered Sites: +2 per Conquered Site (Burned Monastery, Keep, and Mage Tower)
- Adventure Sites: +2 per Adventure Site you defeated (Monster Den, Dungeon, Ancient Ruins, Spawning Grounds, and Tomb)
- Wounds: -2 per Wound in your deck

Scenarios may also come with additional scoring bonuses. Refer to each scenario rules.

2. VARIANT RULES

Variants are here to add even more variety to the game, and to adjust it to your tastes. We recommend you follow these rules when picking variants:

- You should play your first few games with the standard rules only, to better understand the game.

- Do not pick too many variant rules at once, as you might easily forget which rules apply and which do not.

MAP VARIABILITY

Map Shape and Number of Tiles

The map shapes and the number of tiles for the scenarios are just recommended settings. If you discover that you like some map shapes better, if you want more or less interaction at the start of the game or during it, or if you want more or less tiles to explore, or even cities to conquer, feel free to choose different map shapes and number of tiles.

Random Tiles Orientation

The orientation of tiles is normally fixed, the player having no choice in how to orient them. That's right, Heroes are just discovering an unknown kingdom, not, say, building a medieval city in the south of France.

However, after many games under your belt, you may notice that the limited amount of tiles causes some

patterns to repeat in the game from time to time. If you want, you may use this rule:

- When revealing a new tile (at the start of the game, or during it), it is rotated randomly. Add it to the map face down (so no one can see how it is oriented), and then flip it by any axis (choose the axis before seeing the tile content).

Note: The symbols in the corners still have to connect, although now, circles can connect to stars, creating irregular shapes.

Random Cities

The cities have a fixed position. The White City is always by a lake next to a keep, the Red City is in desert surrounded by dragons, etc.

That is the game story, and it makes the cities different not just by their garrison and bonuses. If you want more variability, though, you can do it a different way:

- Whenever a City tile is revealed, draw a random City card, and put the city of that color on the central space of the tile, regardless of the space color.

Note: You may also use random cities in scenarios where a fixed city is defined (for example: Green City in the "Druid Nights" scenario), as it is usually because of the city surroundings, not the city color itself. In these cases, use the tile the scenario describes, but when it is revealed, put a random city onto it.

DAYTIME VARIABILITY

Each scenario goes Day, Night, Day, Night... You may change this if you wish, just for variety.

Night Arrival

You may start with a Night round. Note this is more difficult: not only it is harder to use mana and travel

through forests, but you also do not see who defends keeps and towers, and what dangers lurk in the ruins.

If using this, we recommend you roll the mana dice until there is no **gold** and no **black** at the start.

Darkness is Coming

You start with a Day round. At the end of the Round, roll two mana dice. If any of them is **black**, night falls and it is Night until the end of the game. If not, continue with another Day round, and roll again at its end.

CITY LEVELS

The city levels for a given scenario are shown in the scenario descriptions. Once you are experienced, you may increase the city levels, especially when using rules for a cooperative city assault. Soon, you will see that even a city of level 11 can be conquered by a single player, if he has really strong cards and an army suitable for a city assault.

Megapolis

If you find out that even the highest level of cities is not enough of a challenge for you, or if you just want to spice things up, you may turn one of the cities into a Megapolis. Note: This can only be done in scenarios with three or less cities.

- Once you have agreed the levels of regular cities, also agree on the level of a Megapolis: it can be any number from 2 to 24. It does not have to be higher than 11.
- The Megapolis should be always the last city revealed in the game.
- When a Megapolis is revealed, place its figure and take its City card as usual. Then randomly choose one of the City cards not used yet, and put it to the right of the first City card. Also, take the city figure of that color, and put it on the tile, one space right from the first city. The terrain (and, in the case of the Green city, also the symbol) on the space covered by the city figure is ignored.

- Set the level of each city as half of the Megapolis level. If the number is odd, round up for the city on the left, and round down for the city on the right. (So, the level of the Megapolis is the sum of the both city levels.) Draw garrison tokens for both cities, and add them together as the Megapolis garrison (it does not matter which was drawn for which city).

- Treat this pair of cities as one big city:
 - You reveal the entire garrison of the Megapolis from any space adjacent to any of its spaces.
 - You can assault the Megapolis from any space adjacent to any of its spaces.
 - You face the entire garrison of the Megapolis. They are all fortified, and benefit from combat bonuses of both cities simultaneously.
 - In case of a cooperative city assault, players adjacent to any space of the Megapolis can be invited. Randomize and randomly deal all enemies, no matter who stands next to which part of the city.
 - The Megapolis is conquered once all defenders are eliminated. Determine a City leader as normal.
 - If conquered, treat the Megapolis as one big city that has two spaces. A player puts his figure onto

the corresponding card to mark which part he is in. He may move from one part to another during movement (for the standard city Move cost of 2), or leave it by entering a space adjacent to the part he is currently in. Also, to challenge a rampaging enemy when in a city, the player has to be on the space adjacent to that enemy.

- No matter in which part of the city his Hero is, the player may use purchase options of both cities during interaction.
- During scoring, a Megapolis counts as only one city. Note: Scoring does not take city level into account.
- If you decide to play a scenario with two Megapolises, add a random city to the first revealed city tile. The other two cities will go to the second city tile, even if it

happens to be the color you added to the first Megapolis.

RAMPAGE!

This is a kind of side quest. You may add it to any scenario to spice it up.

This kingdom is under heavy raids. Terrorized people are very suspicious and do not trust anyone.

- Your characters start with -2 Reputation (i.e. they have -1 penalty to interaction).
- At the end of each Day, roll a mana die for each space where a rampaging enemy was defeated. If a warm, living color was rolled (**red**, **green**, or **gold**), draw a new enemy to that space.

- If it was **gold**, also add one brown enemy to the usual green or red token. When fighting this enemy, you have to fight both. The space is considered to contain a rampaging enemy as long as there is at least one of these tokens. You get Reputation +1 for each enemy token defeated.
- At the end of each Night, do the same, except this time cold colors (**white**, **blue**, or **black**) count, and you add one extra brown enemy when **black** is rolled.

More Rampage!

For an even more extreme version of this variant:

- Your characters start with -4 Reputation (i.e. they have -2 penalty to interaction).
- At the end of each Day or Night, you roll a die for each defeated rampaging enemy as above. However the rampaging enemy token is added always, and if a warm (during Day) or cold (during Night) color is rolled, you also add the brown one.

MORE DECKBUILDING

If you feel you would like to have more chance to tune your deck during the game, you may use one of the following variants. We do not recommend them for your first few games. Also, when using these rules, your Hero's strength rises faster, so you might want to adjust the game difficulty by increasing the city levels.

Note: If using one of these variants or when cards that allow you to gain more Advanced Action cards enter the game early, there is a chance you might run out of Advanced Action cards. In that case, the monastery offer is affected first (do not deal cards there if there are none left). If there are not enough cards to replenish the Advanced Action offer, just use as many as you can. If there are none, the player gets nothing.

Action Upgrades

- At the end of each Night except the final one (i.e. twice during the standard 6-Round scenarios), reveal 2 Advanced Action cards.

- Then, you may (but do not have to) take one of the displayed Advanced Action cards and add it to your deck. At the same time, you also have to throw away one of your Action cards. The new card has to either be of the same color or share at least one type (icon in the upper left corner) as the card thrown away.
- Then, the card or cards no one picked are put to the bottom of the Advanced Action deck.
- You should shuffle your deck well before the next Round.

Note: You might like this variant if you prefer a slower pace of game. It allows you to take a break once or twice during the game (depending on the number of rounds), to examine and review your deck, and to think what it needs to work better.

Drafting at the Start

This variant encourages long term planning. You plan some upgrades for your Hero ahead of time, and can adjust your decisions during the game to suit your plan.

- After choosing your character (but before the map is set, the dice rolled and the offers revealed), take two cards from the Advanced Action deck randomly.
- Choose one of these cards and sets it aside, discarding the other one.
- Continue until you have three cards set aside. Shuffle the ones no one picked back into the Advanced Action deck.
- Keep the cards in a safe place (ideally away from the playing table, so they do not get shuffled into your deck accidentally).
- At the end of each Day round, when you are shuffling your deck, choose one of these cards and shuffle it into your deck.
- Note: You may use these rules even when the scenario has fewer than six rounds. You just do not use all the cards you picked.

3. SCENARIO LIST

FIRST RECONNAISSANCE

- Credit: Base Game Rulebook
- Expansion required: None
- Length: Four rounds (2 days and 2 nights)
- Purpose: Training scenario. Strongly recommended if you play the game for the first time, as it provides a natural way to learn the game rules and get familiar with them.

On your first mission, you will be sent to an unknown part of the Atlantean kingdom, your task is to locate its Capital. That is all. All the Fame, any knowledge and treasures you manage to get during your mission are yours to keep.

For a detailed description of this scenario, see the Game Walkthrough. Here is just a summary:

Setup

- Map Shape: Wedge with no limitations

- Countryside tiles: 8, sorted by numbers
- Core city tiles: 1
- Core non-city tiles: 2
- Cities: Cities cannot be conquered nor entered in this scenario.
- Dummy Player: There is one standard Dummy player (see the General Principles section). However, if you just want to become familiar with the mechanics, you may also ignore the Dummy player in your first game, and enjoy the experience with one hero and no pressure.

Special Rules

- You score 1 Fame whenever you reveal a new tile (no matter which type).
- Gold Units are not used in this scenario.
- You should not reveal Spells and Advanced Action

cards until they are needed for the first time.

- When taking Tactics, you always choose first. The Dummy player then takes one random card from those remaining.
- At the end of each Day or Night, remove both used Tactic cards from the game. That means, each Tactic card cannot be picked more than once during the game.

Scenario End

When you reveal a city, you have one last turn. If the Round ends during this, the game ends immediately.

Scoring

Take your Fame as the base. Then apply standard Achievements scoring.

SOLO CONQUEST

- Credit: Base Game Rulebook
- Expansion required: None
- Length: Six rounds (3 days and 3 nights)
- Purpose: Solitaire game. Also suitable for a player who wants to understand the game before explaining it to others.

Yes, that is true — you are alone now. But the Council still needs these cities to be conquered. Good luck!

Setup

- Map Shape: Wedge
- Countryside tiles: 7
- Core city tiles: 2
- Core non-city tiles: 2
- Cities: The first revealed City is Level 5; the second revealed City is Level 8.
- Dummy Player: There is one standard Dummy player (see the General Principles section).

Special Rules

- When taking Tactics, you always choose first. The Dummy player then takes one random card from those remaining.
- At the end of each Day or Night, remove both used Tactic cards from the game. That means, each Tactic card is picked exactly once during the game.

Scenario End

When all cities are conquered, you have one last turn (the Dummy player does not).

Scoring

If you succeed in defeating all cities, you are victorious. If not, you have failed. In both cases you may count your score, to see how good you were.

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it. See the other side of the Scoring card:

- Score 10 points for each city you conquered.
- Score an additional 15 points, if you conquered all cities.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.

Variants

You may adjust the city levels to set up the right challenge for you.

You may also use a Megapolis.

SOLO BLITZ CONQUEST

- Credit: Base Game Rulebook, BGG user Oxymandias
- Expansion required: None
- Length: Four rounds (2 days and 2 nights)
- Purpose: Shorter scenario that shares most of the mechanics with the standard game, but is faster.

Again, your task is to conquer all cities. You have only two days and two nights this time, so you were imbued with extra power.

Setup

- Map Shape: Wedge, Wedge, or Open limited to 4 columns
- Countryside tiles: 6
- Core city tiles: 2
- Core non-city tiles: 2
- Cities: Each revealed city is Level 3.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- You start with 1 Fame. Whenever you cross a line on the Fame track, you get 1 extra Fame.
- You start with +2 Reputation (i.e. you have a bonus of +1 for interaction right from the start).
- There are 4 dice in the Source and 4 Units in the offer.

Scenario End

When all cities are conquered, you have one last turn (the Dummy player does not).

Scoring

If you succeed in defeating all cities, you are victorious. If not, you have failed. In both cases you may count your score, to see how good you were.

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it. See the other side of the Scoring card:

- Score 10 points for each city you conquered.
- Score an additional 15 points, if you conquered all cities.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.

Variants

You may adjust the city levels to set up the right challenge for you.

You may also use a Megapolis.

SOLO MINES LIBERATION

- Credit: Base Game Rulebook, BGG user Dr. SnowMan
- Expansion required: None
- Length: Four rounds (2 days and 2 nights)
- Purpose: A shorter scenario similar to the standard one, but with different goals. Fight in the tunnels!

Mines in this friendly kingdom are occupied by enemies! Without a supply of crystals, Mages cannot serve the land. Go there and regain them.

Setup

- Map Shape: Wedge, Wedge, or Open limited to 4 columns
- Countryside tiles: 7 (4 with Mines, 3 without Mines).
- Core city tiles: 1 (always the Red City)
- Core non-city tiles: 1 (with a Mine).
- Cities: The city is friendly. You start with one Shield token on it.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.

- When a Mine is revealed, put one green (if on a Countryside tile) or red (if on a Core tile) enemy token on it, face up. Also, add one brown enemy token, face down. These are enemies controlling the Mine (one is hidden in the deeps). Arrange them in a way that the reverse of the brown one is visible, too, to distinguish them from rampaging enemies.
- To liberate a Mine, you may enter it from its space (as an Action). Fight both enemies. Night rules apply as in a Dungeon (but you can use your Units). If you do not defeat both, the remaining token(s) stay on the space. They can be attacked again later.
- When you defeat the last enemy, you liberate the Mine. Mark it and gain +1 Reputation (+2, if on a Core tile).
- Until liberated, Mines produce no crystals. Once liberated, they produce as usual (the production starts immediately, so you get one crystal on the turn you liberated the Mine).
- At the start of Day or Night, you gain one crystal from every Mine you already conquered, no matter how far away it is on the map. Just a gift from the grateful miners.

- Note: If there are not enough brown tokens, use some substitute for the brown monsters that are on the map but not revealed yet. Draw a new brown monster when it is about to be revealed.

Scenario End

When all map tiles are revealed and all Mines are liberated, you have one last turn (the Dummy player does not).

Scoring

If you liberated all Mines, the mission was successful.

Take your Fame as the base. Then apply standard Achievements scoring.

In addition you score 4 Fame for each of your Mines on Countryside tiles and 7 Fame for each Mine on Core tiles.

Variants

4 Rounds is a tough challenge. You may adjust the length to 5 rounds (3 days and 2 nights) or 6 rounds (3 days and 3 nights) to lower the difficulty.

SOLO DRUID NIGHTS

- Credit: Base Game Rulebook, BGG user Kin Hassar
- Expansion required: None
- Length: Four rounds (2 days and 2 nights)
- Purpose: A shorter scenario similar to the standard one, but with different goals.

Have you noticed the mysterious obelisks with engraved symbols on the Magical Glades around this kingdom? Go and investigate!

Setup

- Map Shape: Wedge, Wedge, or Open limited to 4 columns
- Countryside tiles: 7 (remove only tiles with no Magical Glades on them).
- Core city tiles: 1 (always the Green City)
- Core non-city tiles: 1.
- Cities: The city is friendly. Put one Shield token on it.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- When ending your movement on a Magical Glade,

you may activate it — mark the Magical Glade with your Shield token.

- Once during the first Night, in any of your turns, you may perform an *“Incantation”*. You may not be at an inhabited space and it counts as your Action for that turn. The *“Incantation”* summons one monster for each glade you have your Shield token on — draw that many brown enemies and fight them.
 - The ones you defeat bring you twice as much Fame.
 - The ones you do not defeat disappear after the combat (but the Wounds they did do not).
 - Regardless of how many of them you defeated, at the end of your turn you get one random crystal for each monster you summoned (roll a die for each, like in a monster den).
- At the end of the first Night, remove all Shield tokens from the Magical Glades. You have to mark them again, if you want to use them for an *“Incantation”* the second Night.
- During the second Night, you may do the same, except this time you summon red enemies. The Fame for defeated ones is doubled again, and this time you

get two random crystals for each enemy.

Scenario End

When you have performed the *“Incantation”* during the second Night (in that case, you have more turn, but the Dummy player does not), or at the end of the second Night.

Scoring

Take your Fame as the base. Then apply standard Achievements scoring.

In addition you score 15 Fame for each *“Incantation”* you made (even if you defeated no monsters).

Variants

You may play an Epic version that lasts 3 Days and 3 Nights. Add one Countryside tile and one non-city Core tile to the game. Remove the Shields after the second Night, too. During the third Night, you summon one brown and one red enemy for each Magical Glade you have marked, and get three crystals for each pair summoned.

SOLO TO RETURN

- Credit: Base Game Rulebook, BGG user Kin Hassar
- Expansion required: None
- Length: Four rounds (2 days and 2 nights)
- Purpose: A push-your-luck scenario for those who want to raid the Atlantean continent.

This is an ultimate test of your power. You are sent to an unknown part of the kingdom and the Portal closes after you go through it. After two days and two nights, the Portal opens again for a short while. Only by being at the Portal at that moment you can return home.

Setup

- Starting Tile: Wedge
- Countryside tiles: 6
- Core city tiles: 1
- Core non-city tiles: 1

- Cities: The revealed city is Level 3.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- The Portal closes at the end of first Day (if you are on the Portal at that time you would be eliminated from the game). From then on, the Portal works as an empty plain space.

Scenario End

The scenario ends as soon as the second Night is over.

Scoring

If you stand at the Portal space at the end of the second

Night, you are victorious. If not, your mission is a failure. In both cases you may count your score, to see how good you were.

Take your Fame as the base. Then apply standard Achievements scoring. In addition:

- Score 10 points if you conquered the City.
- If you did not return to the Portal in due time, halve your score (rounded down).

Variants

You may play an Epic version that lasts 3 Days and 3 Nights. Add one tile of each type to the game. In addition, you may increase the level of Cities to 4.

DUNGEON LORDS

- Credit: Base Game Rulebook, BGG user Dr. SnowMan
- Expansion required: None
- Length: Five rounds (3 days and 2 nights)
- Purpose: A shorter scenario similar to the standard one, but with different goals. Let's go underground.

We thought we already controlled this land. We were wrong! There is a vast system of underground tunnels under the kingdom. We do not know who dug these tunnels and why, but we do not care. Go, and seize control of them!

Setup

- Map Shape: Wedge, Wedge, or Open limited to 4 columns
- Countryside tiles: 7 (remove only tiles with no dungeons on them).
- Core city tiles: 1 (always the Blue City)
- Core non-city tiles: 1 (always the desert tile with Monastery and Tomb).
- Cities: The city is friendly. Put one Shield token on it.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.

- Whenever a tile with a Village is revealed, choose any accessible non-swamp space adjacent to that Village (it can even be on a neighboring tile) that has no site on it. From now on, there is a Secret Dungeon entrance on this space. Put a face down brown enemy token on the space to mark it.
- A Secret Dungeon entrance works like any other Dungeon (see its description card). If you conquer it, mark the space and claim your reward. If you fail, discard the monster token and put another random brown enemy on that tile.
- The same applies for Monasteries except you put a red enemy token to an adjacent empty space to mark there is a Secret Tomb.
- The Secret Tomb works the same way as regular Tombs.
- Conquered Dungeons and Tombs (both regular and secret ones) cannot be entered again to fight for more Fame in this scenario.
- All conquered Dungeons and Tombs (including the secret ones) are connected.
 - When on a conquered Dungeon or Tomb space during movement, you may move to any other conquered Dungeon or Tomb space.
 - These two spaces do not have to be of the same

type (you may travel from a regular Dungeon to a Secret Tomb, etc.)

- To do so, you have to pay 2 Move points plus 1 Move point for each space you traveled.
- When measuring the distance, you have to go through revealed spaces, and you have to avoid lakes and swamps. If it is not possible to do so, you cannot travel there.

Scenario End

When all map tiles are revealed and all Dungeons and Tombs are conquered, you have one last turn (the Dummy player does not).

Scoring

If you conquered all the Dungeons and Tombs, the mission was successful.

Take your Fame as the base. Then apply standard Achievements scoring.

When scoring Adventures, also count the Secret Dungeons and Tombs. All Dungeons and Tombs give 4 points instead of 2.

GRAND CONQUEROR

- Credit: BGG user Maciej Krok
- Expansion required: None
- Length: Six rounds (3 days and 3 nights)
- Purpose: A scenario which would allow you to conquer all 4 cities, delivering the feeling that you really own this land before game ends.

Setup

- Starting Tile: Wedge
- Countryside tiles: 5 (numbers: 1, 5, 7, 9, 11)
- Core city tiles: 4 (Blue, Green, Red, White)
- Core non-city tiles: 0
- Cities: Green is Level 2, White is Level 4, Blue is Level 6, and Red is Level 8.
- Dummy Player: There is one standard Dummy player. Choose Goldyx if available.
- You should put tiles A, 1, and 5 face up as usual, and place the rest in their places as stated above face down (they still need to be explored to gain access to them). In this scenario rushing to explore Core tiles is perfectly legal, so you are not forced to explore all Countryside tiles before being able to reach Core tiles.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- Remove interactive skills from both skill piles (optional: you can keep the "Pray for Weather" skill if Norowas is in play).

- You start with 1 Fame. Whenever you cross a line on the Fame track, you get 1 extra Fame.
- You start with +2 Reputation (i.e. you have a bonus of +1 for interaction right from the start).
- There are 4 dice in the Source and 4 Units in the offer.

Scenario End

When all cities are conquered, you have one last turn (the Dummy player does not).

Scoring

If you succeed in defeating all cities, you are victorious.

If not, you have failed. In both cases you may count your score, to see how good you were.

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it. See the other side of the Scoring card:

- Score 10 points for each city you conquered.
- Score an additional 15 points, if you conquered all cities.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.

Variants

If you want to raise the difficulty do as follows:

Normal: Play as per normal rules instead of Blitz rules:

- You start with no Fame. You do not get extra Fame when you cross a line on Fame Track.
- You start with 0 Reputation.
- There are 3 dice in the Source and 3 Units in the offer.

Hard: Same as normal plus increase city levels by 1.

SOLO BLITZ CONQUEST: SPELLBOUND

- Credit: BGG user Tokhuah
- Expansion required: None
- Length: Four rounds (1 day and 3 nights)
- Purpose: A fast pace game in the dark with more Mage Towers than usual.

There is an unnatural darkness looming in the East. Two depleted and pitiful cities that have been at war for centuries decided to break their ageless stalemate by invoking things better left hidden. This has been done through a dangerous use of arcane mage powers. They have gone too far and upset the balance of the mystic energies. A darkness is falling, a darkness of endless night enveloping a spellbound world heading into the abyss. The Council of the Void has charged you with the task of breaking the spell by taking control of both Cities and as many Mage Towers as possible.

Setup

- Starting Tile: Wedge
- Countryside tiles: 5 (three with Mage Towers [4, 9, 11, 13] and two without Mage Towers)
- Core city tiles: 2 (Blue City and one random)
- Core non-city tiles: 1 (2, 3, or 9 chosen randomly)
- Cities: Each revealed City is Level 1.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- You start with 1 Fame. Whenever you cross a line on the Fame track, you get 1 extra Fame.
- You start with +2 Reputation (i.e. you have a bonus of +1 for interaction right from the start).
- There are 4 dice in the Source and 4 Units in the offer.
- At the start of the game place 4 spells in the offer. Pick one and shuffle it into your deck. Thereafter the spell offer will be 3 cards as usual.
- Start with one **black** crystal in your Inventory. This is a one-time ability.
- You have night vision for this mission allowing you to reveal Fortification sites as if it is day.
- Instability of the temporal energies makes use of the Portal impossible. The Council of the Void teleports you directly into the forest adjacent to the Portal.

Scenario End

When all cities are conquered, you have one last turn (the Dummy player does not).

Scoring

If you succeed in defeating all cities, you are victorious. If not, you have failed. In both cases you may count your score, to see how good you were.

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it. See the other side of the Scoring card:

- Score 10 points for each city you conquered.
- Score an additional 15 points, if you conquered all cities.
- Score 5 additional points for each Mage Tower conquered
- Score 10 additional points if all Mage Towers have been conquered.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.

Variants

If you want to raise the difficulty do as follows:

Normal: Play as per normal rules instead of Blitz rules:

- You start with no Fame. You do not get extra Fame when you cross a line on Fame Track.
- You start with 0 Reputation.
- There are 3 dice in the Source and 3 Units in the offer.

Hard: Same as normal plus increase city levels by 1.

HUNTING FOR THE ROGUE KNIGHT

- Credit: BGG user Javasrybe
- Expansion required: None
- Length: Four rounds (2 day and 3 nights starting at night)
- Purpose: A solo exploration scenario with a climactic finale.

A Rogue Knight has become sympathetic to the cause of the inhabitants of an Atlantean City, and has become their protector. By doing so, he betrayed the will of the Council of the Void. Find him, and kill him.

Setup

- Starting Tile: Wedge
- Countryside tiles: 6
- Core city tiles: 4
- Core non-city tiles: 0
- Cities: Cities are Level 4. The Rogue Knight's City level is taken into account in the Rogue's abilities (see below).
- Dummy Player: There is one standard Dummy player (see the General Principles section). The Dummy player is the Knight you were sent to assassinate. Goldyx is hiding in the Green City, Norowas in the White City, Tovak in the Blue City, and Arythea in the Red City.

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- When you find the Rogue Knight's City, put his figurine and the normal Units on the card.
- When you conquer the Rogue Knight's City, end the round and calculate remaining cards for the Scoring. A special "Duel to the Death" Round then begins:

- Shuffle all your cards into your Deed Deck and reset Round Skills. Do not change the day/night cycle or any Offer (Spell, Action, Unit).
- The Rogue Knight's Attack Score equals his city's Level + **White** or **Red** Crystals, whichever he has the most of.
- His Armor Stat is his City's Level + **Blue** or **Green** Crystals, whichever he has the most of.
- In addition, he has the following Abilities:
 - * Goldyx: Brutal.
 - * Arythea: Fire Attack, Cold Resistance.
 - * Tovak: Cold Attack, Fire Resistance.
 - * Norowas: Swift.
- Use the "Player vs Player" rules, with the following differences:
 - 1) One on One: You cannot use your Units for the Duel with the Rogue Knight.
 - 2) Up close and personal: There is no Ranged/Siege phase for the Duel, although you can use them normally as Attacks.
 - 3) Play attacks alternatively, starting with your opponent, and Assign Damage as you would for Single Player (i.e. Wounds only occur when there is damage greater or equal to Armor)
 - 4) End the turn after each of your attacks. (Discard, Reset Source and Skills, Draw, etc.)
 - 5) If you ever accumulate a number of Wounds in hand equal to your Hand Size, you lose the duel and your opponent will finish you off mercilessly.
 - 6) You also lose if you run out of cards.
 - 7) Should you inflict the Rogue Knight a number of Wounds equal to his City's level,

he is defeated and you execute him for his betrayal.

Scenario End

This scenario ends in blood, with the Rogue Knight's death (or yours).

Scoring

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it. See the other side of the Scoring card:

- Score 10 points for each city you conquered.
- Score an additional 15 points, if you conquered all cities.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped before the Duel).
- If the End of the Round was not announced yet in your last Round before the Duel, score an additional 5 points.

If you defeat the Rogue Knight, double your score.

If you did not find the Rogue Knight, halve your score.

Variants

If you want an easier/tougher fight, vary the level of the Rogue's city (affecting his Attack/Armor and Wounds)

Tip

Since you will know from the start which Mage Knight you are facing, shape up your Actions and Spells accordingly! (For instance, stacking up on Cold Blocks before facing Arythea sounds like a good idea...)

RETURN TO THE VOID

- Credit: BGG user Javasrybe
- Expansion required: None
- Length: Variable (about 4 Rounds)
- Purpose: The object of the game is to reach the portal.

You feel its presence as soon as you pass through the portal on your dark mission, though you know not what it means. Dozens of cities have fallen to your might and magic, but this time feels different.

In less than a day, garrisons have fallen, mages cowed, and Orc Khan obliterated. Your speed and might are unparalleled. Across the days, your powers grow and your ranks swell with the disillusioned masses of the Atlantean Empire. By all appearances, everything is as it should be as you approach your waiting target - that towering monolith of a city that your enemies hide within. Even so, an unshakable sense of coming doom stirs in your heart. You become weaker as something within the city saps your strength and renders your powers impotent. All too soon, you discover why. The Atlanteans have discovered a secret weapon that brings you to your knees.

They call it the Mage Stone, a shimmering rune of unimaginable power, crafted to devour the very essence of the Void. That which made you special, that which made you powerful, is gone. With your Mage Knight powers drained, you fall to the combined forces of Atlantean forces within the city.

The Mage Stone can sap the powers of the mightiest Mage Knight, but it cannot destroy the resolve of those that rally to his cause. Nary a week after your capture, your prison is liberated by the peasants and town-folk who call you leader. Your only hope now is to escape back to the Void and warn the Council of the coming danger. Time is of the essence however. Your former captors will stop at nothing to hunt you down.

Setup

- Starting Tile: 1 Random City, See below
- Countryside tiles: 8
- Core city tiles: 1-4 (Variable — see below)
- Core non-city tiles: 2-5 (Variable — see below)
- Randomly pick one City Tile as your starting tile. Then mix all remaining Core Tiles and draw 5.
- Cities: Cities are Level 1 except the starting City, which has no enemy at the beginning.
- Set the map as shown.
- Tiles are flipped face up when they are explored (by spending 2 movement points)
- Dummy Player: There is no Dummy player.

Round Order:

With your Mage Knight abilities drained, your speed and powers are reduced. While it took you mere days to reach the city, it will take you weeks to return to the portal. Each Round is three days long, and is represented by 6 tactic cards (the first 3 daytime and first 3 nighttime tactics). Form a deck of these tactic cards by arranging them in Day / Night order from 1 to 3 (Day 1, Night1, Day 2, Night 2, etc.). This is the Round Deck.

To begin the game, reveal the top card from the Round Deck (Day Tactic 1). Play a Turn while this tactic card is revealed. Daytime rules apply when a daytime tactic is showing.

On your next turn, reveal the next card from the Round Deck (Night Tactic 1). Play a Turn while this tactic is revealed. Nighttime rules apply. In this way, you will work your way through the Round Deck until it is depleted. *Ignore any text on Tactic cards.*

After the third Night, when your Round Deck is depleted, the Round is over. If your draw deck is depleted in the middle of the round, you may not act for the remaining "days" of the week. You are exhausted and will need to rest before continuing. The enemy unit, however, will continue to advance on days that you rest (see Hunted section below).

Special Rules

- You start on the revealed city space (random color).
- Use 4 mana dice in the source. They are rerolled each Round (see above).

- Start the game with a Peasants unit. These are the people who liberated you.
- Followers are reactivated each day (before your daytime turn).
- You start the game with 0 Fame and 0 Reputation.
- All cities revealed are at level 1 and react like roaming monsters to your movements. (They will attack if you move from one adjacent spot to a different adjacent spot.) You lose no reputation if they attack you, but you will lose reputation if you assault the city. If you move into an undefended city (because you already defeated them) you do not lose reputation.
- Advanced Units are added to the offering once a second city tile is revealed.

Hunted

The city forces have been alerted to your escape. On the start of the second day of the first Round, place a white city forces token face down on the city spot. This represents the forces organizing the hunt. On the start of the third day of the first Round (before you move), move the city forces token one space toward your character. On each subsequent "day" turn before you have acted, move them another one space toward your character.

Hunters cannot move on lakes, mountains or spaces occupied by rampaging enemies. However they can go through Keeps, Cities and Mage Towers.

When two paths are equivalent, the Hunter should always take the northernmost path to force you toward the Portal.

This force possesses the Mage Stone and cannot be defeated. If they ever enter the space you are on, you are defeated. You are also weakened by the Mage Stone. If you are Knocked Out at any time during the game, you are defeated.

Scenario End

- If the approaching city forces enter your space, then you lose the scenario.
- If you are Knocked Out at any time, then you lose the scenario.
- You win by reaching the Portal

Scoring

Take your Fame as the base. Then apply standard Achievements scoring.

Variants

You may increase the city levels to get a tougher challenge.

REVENGE OF THE DRAGON LORDS

- Credit: BGG user Andrew_zz
- Expansion required: None
- Length: Nine rounds (2 day and 1 night repeated 3 times)
- Purpose:
 - To create a play tested bigger challenge for solo players
 - To make passing a location and returning later a viable option as previously it felt like a one way trek.
 - Making choosing tactics cards is a little more interesting as you can ensure you play first, coupled with the dummy player playing a little faster.
 - Creating choices. After gaining a few fame the player is split between aiming to conquer the first City for the elite units or defeating the first Draconum for the artifact.

The dragon lords have taken control of the four capital cities and you need to recapture them saving the kingdom.

Setup

- Starting Tile: Open Map, 3 Columns
- Countryside tiles: 10
- Core city tiles: 4
- Core non-city tiles: 1

- Tiles are stacked as two countryside tiles followed by a core tile, repeated 5 times. First Core tile is the non-city tile. This means the core tile will be in play from the start of the game, make sure this is the central tile (after this they can be placed anywhere).
- Cities: First City is Level 7, Second City is Level 11, Third City is Level 7 with an extra Draconum and Fourth City is Level 11 with an extra Draconum. If a Draconum is defeated but the City is not then the Draconum is replaced.
- Dummy Player: There is one standard Dummy player.

Special Rules

- When taking Tactics, randomly deal 3 cards to the Dummy player who takes the middle value one. You then choose your Tactic card between the 3 remaining.
- Before starting the game draw three advanced actions, pick one to add to your deck and place the other two into the dummy player's deck. Add to the Dummy player card three crystals per card added of the same color as the card (in addition to the 3 regular crystals).
- An assault against a city does not decrease reputation.
- No elite units will be in the offering until at least one city is defeated.
- You may not interact with a monastery until you have

defeated at least one Draconum. The first time you visit any monastery after defeating a Draconum you gain a free artifact.

- You start each turn with two movements even if you have no cards in hand.

Scenario End

When all cities are conquered, you have one last turn (the Dummy player does not).

Scoring

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it. See the other side of the Scoring card:

- Score 10 points for each city you conquered.
- Score an additional 15 points, if you conquered all cities.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.

Variants

If you want tougher challenge, set time limit to 8 (losing 1 night) or even 7 rounds (losing 1 day and 1 night).

THE GAUNTLET

- Credit: Trevin Beattie
- Expansion required: None; Lost Legion optional
- Length: Six rounds (3 days and 3 nights)
- Purpose: A solitaire game whose goal is to get to the end!

The Council of the Void has taken note of your deeds and selected you to go on a mission to retrieve a rare artifact from the city of the desert. This city can only be reached through a long and treacherous canyon. Hurry, your time is limited!

Setup

- Map Shape: Linear. Use side B of the starting tile. Each new tile extends in the opposite direction from the point of the coast. (The "Random Tiles Orientation" variant is not permitted in this scenario.) The first tile next to the starting tile is revealed as normal.

- Countryside tiles: 7. Remove Countryside tile 11 before shuffling and drawing the Countryside tiles.
- Core city tiles: 1, always the Red City, at the bottom of the tile stack.

- Core non-city tiles: 3. If playing with the Lost Legion expansion, choose three of the Core tiles 2, 4, 9, and 10. With just the base game, use tile 2, 4, and one other random tile (remove one with no rampaging site).
- Cities: The city is friendly. Place its City card in play but do not put any Shield token on it.
- Dummy Player: There is one standard Dummy player.
- Skills: You may use either the competitive or cooperative Skill in the player's Skill deck.

Special Rules

- When taking Tactics, you always choose first. The Dummy player then takes one random card from those remaining.
- At the end of each Day or Night, remove the Tactic card that you used from the game. Return the Dummy player's Tactic card to the deck.
- For every second Rampaging Orc you defeat, in addition to increasing your Reputation, add one of your Shield tokens to the City.
- When you defeat a Rampaging Draconum, in addition to increasing your Reputation by 2, add one Shield token to the City.

You can double-check the number of Shield tokens which should be on the city by adding half of the

defeated Rampaging Orc spaces plus all of the defeated Rampaging Draconum spaces.

Scenario End

The game ends at the end of the turn in which you buy an artifact from the Red City, or at the end of the sixth Round, whichever comes first.

Scoring

If you succeed in entering the Red City and buy an artifact, your mission was successful. If not, you have failed. In both cases you may count your score to see how good you were.

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it:

- Score 10 points for entering the Red City.
- Score an additional 10 points for buying an artifact from the Red City.
- If you finished the game one or more Rounds before the limit, score 40 points for each such Round.
- Score 2 points for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.

THE APPRENTICE

- Credit: Bruce Clark
- Expansion required: None
- Length: 6 (or 4) rounds
- Purpose: A young aggressive apprentice seeks to take over the mantle as the country's only Mage Knight!

Growing up in your countryside village, you have lived a happy, safe life. Ever vigilant, the Mage Knights would always protect your town from vile Orcs, rampaging draconum, and wandering warlocks. You had looked up to them, wanted to be one someday. You would always practice sparring with your friends, but you eventually grew tired of all the easy combat.

Upon entering adulthood, one of the Mage Knights visiting your village noticed your skill with a weapon, and quickly brought you under his tutelage. He was a firm Master, but fair. He would teach you everything he knew about Mage Knighthood, and you were hungry for more. One day soon you would plan to overtake your Master, and seek out your own conquests.

Setup

- Starting Tile: Special (1,2, and 3), No limitation.

- Countryside tiles: 5 (or 3)
- Core city tiles: 1
- Core non-city tiles: 2
- Tiles are stacked with Countryside tiles on top and the City Tile at the bottom.
- Cities: City is Level 4.
- Roll 6 mana dice to fill the source (day side). Re-roll any **black** mana.
- Your starting hand consists of 2 Wounds and 3 cards from your starting deck

- Start with your character on the village on tile 2.
- Populate Rampaging Orcs and Keep per standard rules (as shown above)
- Choose another Mage Knight to represent your Master. Shuffle the Master's deck and set to the side face down.
- Dummy Player: There is no Dummy player.

Special Rules

- There are no Tactics in this game.
- You may use only 1 mana from the source per turn (unless a card says otherwise). Do not return this die at the end of your turn. If all mana from the source is expelled, end the Round after your current turn. The Round may also end if you depleted your deck as per normal rules.
- Each Round has 6 mana. Days always start without **black** mana. Nights can start with up to 2 mana (re-roll any **gold** mana).

Play

- You are an Apprentice Mage Knight, under the tutelage of a Master. You start out weaker than normal, represented by the 2 Wounds in your hand. **These 2 Wounds cannot be healed.**
 - When you achieve Level 2, you simply remove 1 Wound from play (you will still have 1 unremovable Wound in your hand).
 - At Level 3, you will be at full strength, removing the second Wound.
- Your Master will help you on your journey. Move, Attack, Block, and Influence are as normal, but if you need help in battle, reveal the top card from your Master's Deck.
 - The stronger effect will be free (no mana required), or it can always be played sideways for 1x (as usual). He can only assist in Battle (Block or any kind of Attack).
 - If you use his help, reduce fame gained by 2 per card played (to a minimum of 1).
- While you are training, Rampaging Orcs will re-spawn at the start of each new Round (after you successfully overtake your Master, the Rampaging Orcs no longer re-spawn).
- At any time, you may return to your starting Village to challenge your Master (in fact, if you cannot challenge him and win by the end of the second Round, you lose).

- To challenge him, draw a purple Enemy Token while at the starting Village and play normally. Your Master will not help you, of course.
- Take a -2 penalty to Reputation each time you challenge your Master

After overtaking your Master:

Undeterred by his recent loss to his Apprentice, the Master flees to a nearby City. Menacingly, he sends dragons and other units out to hunt down his former pupil, to try to teach him a permanent lesson. The former Apprentice's resolve is hardened and will not rest till he defeats his former mentor one last time. This country is not big enough for 2 Mage Knights.

- At start of a new Round, draw 3 cards from your Master's deck. Remove 1 of each colored mana from the source, if possible.
- At the start of Rounds 3 and 4, the Master immediately dispatches a Draconum to fight you at the start of each Round (after the Source has been populated). Fight as normal (full starting hand and readied units). If you do not defeat the Draconum, it takes your place and pushes you back 1 space. For now on it is a rampaging enemy. Also add a grey token to the City defenses.
- At the start of Rounds 5 and 6, the Master sends a white enemy (while still adding a grey token to the City defenses). If you do not defeat the white enemy, it takes your place and pushes you back 1 space. For now on it is a rampaging enemy
- When ready, attack the City to win the game, adding any additional grey tokens to the city's defenses.

Scenario End

If you do not defeat your Master by the end of Round 2, you lose.

If you do not conquer the City by the end of Round 6, you lose.

If you manage to conquer the City you are victorious.

Scoring

Take your Fame as the base. Then apply standard Achievements scoring.

Variants

Adjust the city level to set up the right challenge.

DRAGONSLAYER

- Credit: kittenhoarder
- Expansion required: Lost Legion
- Length: Five rounds (3 days and 2 nights)
- Purpose: Solitaire game that is more open-ended and eases newer players into multi-enemy battles.

Those Draconum are getting out of control. The Council needs you to curb their numbers before we move on to the human population. Be careful--the locals have locked themselves away in fear, and interaction will be difficult until you earn their trust.

Setup

- Map Shape: Wedge, or Open limited to 4 columns
- Countryside tiles: 4
- Core city tiles: 1 (Blue City)
- Core non-city tiles: 3 (2, 4, and 9)
- Cities: The city is friendly. You can enter and interact with it freely, but do not receive any leader bonuses.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Tactics cards are handled identically to the Solo

Conquest scenario.

- The Rampage! variant (see the Variant Rules section) must be used with this scenario. However, you start with -5 reputation (the first -5 space) instead of -2. In addition, if a roll to replace a Rampaging Draconum fails, you may always choose to place a red and brown token there, as if you had rolled a **gold** or a **black** die.
- When you defeat a Draconum, place a shield token on that space. This counts as an Adventure Site for scoring. You can have multiple shield tokens on the same Rampaging Draconum space.

Scenario End

When all red tokens have been defeated (i.e. placed in the discard pile), you have one last turn (the Dummy Player does not).

Scoring

There is no victory condition; instead, you are trying to achieve the highest score possible by defeating as many Draconum as you can.

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it. See the other side of the Scoring card:

- Score an additional 1 point for each adventure site you conquered.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.

Variants

If you would rather have a defined victory condition, you can set the difficulty level for yourself, such as defeat X Draconum to win.

If that is still too easy, the Blue City is not friendly (but counts only as 10 points toward final scoring; do not score the "all cities defeated" bonus).

STROLLING IN THE DEEP

- Credit: Artemus Maximus
- Expansion required: None
- Length: Six rounds (3 days and 3 nights)
- Purpose: A solitaire game similar to Solo Conquest, but with aggressive moving enemies.

The Council of the Void has sent you back to a kingdom that has already been conquered by a fellow Mage Knight recently. Unfortunately, this Mage Knight, who remains nameless, did not thoroughly cleanse the land of evil. While the White City remains loyal, the rest of the land has fallen under the threat of a dark sorcerer that has usurped rule of the neighboring Red City. He has sent his minions forth to regain control of the land — Orcs once again roam the countryside, marauding the Villages and Monasteries. Terrible monsters from the depths of the underground are emerging in great numbers as well. And what's worse, the Draconum have returned with a vengeance, scouring the land and destroying anything in their paths. The fortified Keeps and Mage Towers have shut their gates, fearful to let anyone or anything in. You must cleanse this land once again, and retake the Red City.

Setup

- Map Shape: Wedge
- Countryside Tiles: 6 (include tiles 6, 7, 9, and 10)
- Core City Tiles: 2 (the Red and White Cities)
- Core non-City Tiles: 3 (include tiles 1 and 3)
- Cities: See Special Rules
- Dummy Player: There is one standard Dummy player.
- You will also need the Dummy player's Shield Tokens.
- Ancient Ruins Tokens: Remove all tokens depicting green, tan, and/or red enemy tokens to fight for reward. They will not be used.
- Lost Legion Expansion: All components may be included, except:
 - Volkare's Camp tile
 - Volkare
 - the Ancient Ruins token with 3 green enemies

Special Rules

- When taking Tactics, you always choose first. The Dummy player then takes one random card from those remaining.
- At the end of each Day or Night, remove the Tactic card that you used from the game. Return the Dummy player's Tactic card to the deck.

Rampaging Enemies

In this scenario, Monsters can emerge out of the dark places — they will not wait for you to come to them!

- When Preparing for a new Round, first check each Monster Den, Dungeon, Spawning Grounds, and Tomb on the map. (except on the first Day)
- If the Adventure Site does not contain a Shield token, an enemy token, or your hero, an enemy emerges from the depths: place a corresponding enemy token on the space, face-down:
 - Monster Den — 1 Monster (tan) enemy token
 - Dungeon — 1 Monster (tan) enemy token
 - Spawning Grounds - 2 Monster (tan) enemy tokens
 - Tomb — 1 Draconum (red) enemy token

From this point on, all of these enemy tokens (and any other green, tan, or red enemies already on the map) are considered to be Rampaging Enemies — they can be provoked or assaulted from adjacent spaces like normal rampaging enemies.

- This means that you may not explore an Adventure Site on your turn if there is an enemy token on the site already — the rampaging enemy must first be

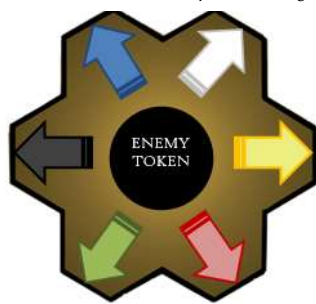

dealt with. After a Rampaging Enemy is destroyed on such a site, then it may be explored as normal.

- When you kill a Rampaging Monster enemy, you gain Reputation +1 at the end of your turn.
- All Rampaging Enemies are always placed face-down when placed on the map. They are revealed at Day when adjacent (whether you move adjacent to the enemy or the enemy moves adjacent to you), or at night when you assault (blind). This includes Orcs and Draconum.

Enemy Movement

Not only are there more Rampaging Enemies in this land and the nature of them hidden, but they also roam freely in the countryside, wreaking havoc, striking fear into the locals!

- After generating Rampaging Monsters at the start of a Round, reroll the source dice, 1 at a time. DO NOT reroll **black** or **gold** dice if >1, until all Rampaging Monsters have moved. Keep the 3 dice in the order rolled. Then, one by one, move each Rampaging Enemy (Orcs, Monsters, and Draconum) on the map in the direction below relative to its current location, according to the color rolled on the dice, for each of the 3 dice, in the order rolled (per following diagram)

- Draconum move 2 spaces per die. All Draconum on the map should be moved before Orcs and Monsters move. Draconum may not enter the following spaces:
 - Unexplored spaces
- Orcs and Monsters move 1 space per die. They may not enter the following spaces:
 - Unexplored spaces
 - Lakes
 - Mountains
 - Fortified Sites (Keeps, Mage Towers, White City)
 - Through Walls
- If an enemy cannot move in the direction indicated by a die, the enemy remains in its place. Continue to the next die movement or enemy.
- If an enemy enters an inhabited space, it is immediately destroyed! (Village, Monastery, Refugee Camp, Mage Tower, or Keep. Draconum only for the last 2. See below for Cities). Place a Shield Token belonging to the Dummy player on the space. This site is considered to be non-existent for the remainder of the game. The Dummy player's shield token replaces yours if a Draconum enters a Keep or Mage Tower you control (it is now destroyed), but not if any enemy enters a Monastery site with your shield token on it (it was already burned to the ground by you!)
- If an enemy enters your hero's space, it remains there and attacks you! You must fight the enemy(ies) on your first turn. Level 1 units may not participate (they are frightened!). If you lose the combat, you may retreat to a safe space, if able. If unable to retreat, you must continue to fight on subsequent turns until the enemies are defeated. If a Draconum enters a fortified site where your hero currently is, the Draconum fights you — the site is not destroyed.

Cities

The White City is loyal to you — the Red City however...

- The White City:
 - Is set to Level 3 when revealed.
 - You may enter this city freely and interact as if you controlled it (you may not attempt to conquer it and you do not control it)
 - If a Draconum enters the White City space while you are not present, reduce its level by 1 (if your hero is present, the Draconum will fight you on your first turn instead). Place a Shield Token belonging to the Dummy player on the White City Reference card.
 - If the White City's level is reduced to below 1, it is destroyed! It is considered non-existent for the remainder of the game.
- The Red City:
 - Is set to Level 8 when revealed.
 - If any rampaging enemy (Orcs, Monsters, Draconum) enter this city space, they remain in its garrison — place the enemy token on the Red City Reference card. You must defeat this enemy as well when you assault the city.

Scenario End

When the Red City is conquered, you have one last turn (the Dummy player does not). Otherwise, the scenario ends after the third Night.

Scoring

If you succeeded in conquering the Red City, you are victorious. If not, you have failed. In either case, count your score.

Take your Fame as the base. Then apply standard Achievements scoring.

Then score for your goal and for the time to reach it:

- Score 15 points if you conquered the Red City.
- Score an additional 15 points, if you conquered all cities.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.
- Score -3 points for each Dummy player shield token on the map and White City Reference card.
- Score -3 points for each Orc remaining on the map.
- Score -5 points for each Monster (tan) remaining on the map.
- Score -8 points for each Draconum remaining on the map.
- Score -10 points for each map tile not revealed.

VARIANT

Strongholds:

The Keeps in this land have stronger garrisons, and are led by a Lord. Try this variant if you own the Lost Legions expansion and would like a slightly more difficult challenge with more rewards.

- When setting up the game, remove all 6 Banner Artifact cards from the Artifact deck and create a new face-down Banner Deck.
- Whenever a Keep (Stronghold) is revealed, place 2 grey enemy tokens on it, instead of just 1.
- When you conquer a Stronghold, you also gain a Banner Artifact — draw the top card of the Banner Deck and add it to the top of your Deed Deck.
- You keep the Banner Artifact even if the Stronghold it came from is destroyed by a Draconum later on.

KRULL

- Credit: Javier Plaza
- Expansion required: None
- Length: Six rounds (3 days and 3 nights)
- Purpose: Find the black fortress and defeat the Beast and his army of Slayers.

This it was given me to know; that many worlds have been enslaved by the Beast and his army, the Slayers. And this too was given me to know; that the Beast would come to our world, the world of Krull, and his Black Fortress would be seen in the land. That the smoke of burning villages would darken the sky, and the cries of the dying echo through deserted valleys. But one thing I cannot know; whether the prophecy be true, that the girl of ancient name shall become queen, that she shall choose a king, and that together they shall rule our world, and that their son shall rule the galaxy.

Setup

- Map Shape: Custom
- Countryside tiles: 10 (Tile 9 must be selected)
- Core city tiles: 4
- Core non-city tiles: 4 (Tile 1 must be selected)
- Portal map tile (side B) is used in this scenario. Spaces on this map tile that are partially covered by water are treated as lake spaces (use **blue** crystals to mark this). The full map is set up at the beginning of the scenario. The map shape is configured in concentric circles around starting the Portal tile (see figure).
 - Portal map tile, side B: (*Face Up*)
 - First ring (*Face Down*): Full, 6 random Countryside tiles. These can be explored.
 - Second ring (*Face Down*): 4 Countryside tiles and 4 Core non-city tiles. 1+1 in each compass direction; these can be explored.
 - Third ring (*Face Up*): 4 Core city tiles. Each of the city tiles is adjacent to two tiles on the second ring. Treat the spaces of the cities as empty spaces for the purpose of holding the Black Fortress (see special rule Find the Black Fortress)

- Artifacts: Search the Artifact deck for the Sword of Justice and set it aside.
- Unit offer: Remove from the game Units that can only be recruited at Cities.
- Dummy Player: There is one standard Dummy player.

Special Rules

- No Tactic cards are used in this scenario. To determine order of play, during Day rounds you act first, and during Night rounds the Dummy Player acts first.
- No tile can be explored outside the map shape.
- Due to local resistance against invasion, increase by the Unit offer by one throughout whole scenario.
- Find the Black Fortress: The Black Fortress, home of the Beast, moves from location to location. There are four possible locations in Krull, matching the four spaces for the Cities. At the beginning of each Round, roll a mana die to see where the Black Fortress will be found for that Round according to the accompanying table. If you roll **gold** or **black**, repeat until you get a basic color result. If you roll a basic color but the Black Fortress is already in that location, then roll again until you get a new result. Mark the current location of the Black Fortress with a **black** crystal. Do not roll this die if you have spoken to the Widow of the Web in the previous Round (see special rule below).

LOCATION	CITY	ROLL
Granite mountains	Blue	Blue
Iron desert	Red	Red
Grimaut plains	White	White
Emerald swamp	Green	Green

- Enter the Black Fortress: In order to enter the Black Fortress, you must first defeat its defenders, the

The Beast	Armor	Attack	Fame
Value	10	4	9
Abilities	Arcane immunity	Fire	
	Physical resistance	Brutal	
	Ice Resistance		

Slayers. Draw two City enemy tokens (white) when you are adjacent to the Black Fortress, and fight them as if they were rampaging enemies. These Slayers respawn at the beginning of each round. Once you have defeated them, you can spend 2 move points to get in.

- Inside the Black Fortress: Once you are in the Black Fortress, you are not affected by its movement, and you cannot leave it until you defeat the Beast. To reach its center and face the Beast, you must spend 11 move points. After each movement phase in which you have not yet reached the Beast, you must face a Slayer (draw a City enemy token and fight it). Defeating Slayers within the Black Fortress do not grant any Fame. Keep track of how many movement points you have spent by placing 11 crystals on a City card, and removing one crystal per movement point spent towards reaching the Beast. After a movement phase in which you have already spent 11 move points within the Black Fortress, you can assault the Beast. The characteristics of the Beast are given in the above table. You must fight every turn you are inside the Black Fortress. If you choose not to assault the Beast immediately upon reaching the center, then you must fight a Slayer instead (draw a City enemy token). Night rules apply while inside the Black Fortress, but none of the enemies you fight there benefit from site fortification.
- Conquered and enslaved: The Beast and his army of Slayers came to the world of Krull to enslave and rule its people. At the beginning of each Dummy Player's turn during Night rounds only, the closest inhabited location to the Black Fortress (Village, Monastery, Keep, or Mage Tower) is automatically conquered by the Slayers. Place a Slayer enemy token (grey) on the location and mark it with a Shield of the Dummy Player. If it is an unconquered Keep or Mage Tower, then replace its garrison with the Slayer enemy token. These Slayer enemy tokens are always face down, and can be revealed by moving adjacent (during a Day round) or assaulting (during a Night round). If a Mage Knight loses a Mage Tower or a Keep to the Slayers, they also loses any related benefits (such as increased hand size). Locations occupied by or adjacent to a Mage Knight are protected from the Slayers. If a location that should be conquered is protected by a Mage Knight, then no location is conquered that particular turn. The conquered locations must be assaulted to fight the Slayer enemy tokens, but Villages and Monasteries do not grant fortification to the Slayers. You can liberate locations by defeating the enemy tokens. Assaulting a conquered location does not lower Reputation; instead, you gain +1 Reputation by liberating it. Liberated Mage Towers do not grant a spell from the offer as a reward. Once liberated, the sites can be entered and used normally. Take and put aside all Shields recovered from liberating locations, as they will be used for scoring.
- Widow of the Web: Spawning grounds located on Core non-city map tile 1 hold the den of the Widow of the Web (mark this with a **white** crystal). Once you clear the monsters inside, as your action for the turn you may sacrifice a Unit you control to speak to the Widow of the Web and find out where the Black Fortress will rise. If you do so, roll a mana die and use

the table in the Find the Black Fortress special rule to learn where the Black Fortress will rise at the beginning of next Round. You can only speak to the Widow of the Web once in the game.

- Firemares: These amazing horses can be found at any empty plains space adjacent to a mountain space. As your action for the turn, you can find them and ride them in the same turn. To gain control of them, you must pay 2 move, 2 attack, 2 block, and 2 influence points. By riding the Firemares, you draw and discard X cards from your Deed deck to move X revealed spaces, regardless of terrain type and movement cost. You must decide beforehand how many spaces you are moving. You can cross lakes and mountains, but you can only end your movement in a Safe Space. Moving this way does not provoke any attack.
- The Glaive: The adjacent mountains located on Countryside map tile 9 hold a cave containing a crate where the Glaive rests. This legendary weapon is represented by the artifact card The Sword of Justice. Either of these mountain spaces can be entered at a movement cost of 8 to search for the Glaive. In order to get the Glaive, spend your action for the turn and

gain a wound. You may then add the Sword of Justice to the top of your Deed deck. These mountains cannot be reached by riding the Firemares (see special rule above).

Scenario End

This scenario ends when the Beast is defeated, or the time limit for the scenario is reached.

Scoring

You win if you enter the Black Fortress and defeat the Beast within the time limit of the. Otherwise, you lose. In order to count your score, take your Fame as a base and apply only the special scenario achievements below:

- Gain 5 extra Fame for each location liberated from Slayers.
- Gain 30 Fame if you still have the Glaive at the end of the scenario.
- Gain 30 Fame if you did *not* speak to the Widow of the Web.
- Gain 30 Fame for each full Round remaining when you win.

- Gain 1 Fame for each card remaining in the Dummy Player's deck.

Cooperative Play

- Enter the Black Fortress: Draw as many defenders as number of players in the game plus one (i.e., in a two-player game, three defenders will be drawn).
- Inside the Black Fortress: Each Mage Knight takes a different path within the Black Fortress, and must pay individually the movement points needed to reach the Beast. Slayers encountered on the way are fought alone.
- The Beast: A cooperative attack can be launched once several Mage Knights have reached the Beast. In this case, the Beast will attack all Mage Knights facing it.
- Conquered and enslaved: During Night rounds the Slayers will conquer as many locations per turn as there are players in the game. It may happen that one or more locations that should be conquered by the Slayers are protected by Mage Knights. In that case, just conquer one or no locations that particular turn.

QUEST FOR THE GOLDEN GRAIL

- Credit: Jim Norris
- Expansion required: Lost Legion
- Length: Six rounds (3 days and 3 nights)
- Purpose: Solitaire game to find the Golden Grail and return it to the Council of the Void

The Lord of the Council of the Void has been stricken by a powerful curse. The Council exerts great magics to hold him at the threshold of death, but they will soon fail. According to legend, the great prophet Solandir forged the Golden Grail in ancient times, and it had the power to heal the wounded, cure the sick, and to cleanse any curse. However, after the prophet's death the Grail was lost, its final resting place a mystery. The Council has dispatched Mage Knights to every corner of the realm to seek the Grail. Will you be the one to find it, and save the Lord of the Council?

Setup

Special Setup Note: Divide the Countryside tiles into two categories. Select the specified number of each, then shuffle them together in one stack (so that all Countryside tiles are drawn prior to Core tiles):

- 1) Knowledge sites (tiles that contain either a Monastery or a Mage tower).
- 2) Wilderness sites (tiles that contain neither a Monastery nor a Mage tower).

- Map Shape: Wedge
- Knowledge site tiles: 4
- Wilderness site tiles: 3
- Core city tiles: 1
- Core non-city tiles: 2
- Cities: The city when found has a Level of 4.
- Dummy Player: There is one standard Dummy.
- Cards and skills: See rules for Solo Conquest.
- Artifact deck: Search the deck and set aside the Golden Grail. Shuffle the remaining artifact cards, and place them on top of the Golden Grail (so that the Grail is the bottom card in the deck). *Important Note:* This scenario is balanced using a 24 card artifact deck which requires the Lost Legion expansion. If you have only the base game, add 8 wound cards to the artifact deck. See the notes below on the Challenging game

for handling wounds in the artifact deck when receiving a reward (be aware this will be somewhat more difficult than the standard game).

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- Monastery: At a Monastery, during an "Influence" action, you may spend 4 Influence to "Search the Ancient Texts" for clues to the Grail's location. Draw 3 cards from the artifact deck. Discard 2 of the cards to the bottom of the Artifact deck, and return one to the top of the deck. This action may be performed only once per location per game; mark the location with a crystal to indicate this once it has been used. *Special exception:* If a Monastery is burned that has had "Search the Ancient Texts" performed on that location, the player draws only one artifact card as a reward (rather than choosing between two).
- Mage Tower: At a Mage Tower, during an "Influence" action, you may spend 4 Influence to perform a "Ritual of Scrying". In addition, you may also fuel the ritual with up to 3 additional mana. Draw 2 artifact cards, plus one additional card per mana spent. Discard one of the cards drawn back to the top of the artifact deck, and the remaining cards to the bottom of the deck. In addition, if you spent mana as part of the ritual, you may explore one tile adjacent to the tile in which you are currently located for free. This action may be performed only once per location per game; mark the location with a crystal to indicate this once it has been used.
- Ancient Ruins: Ruins may hold important clues to the fate of the Grail. If you clear a Ruin that *does not include an artifact as a reward*, you may draw two cards from the artifact deck. If one of the artifacts is the Golden Grail, you may return it to the top of the artifact deck, and discard the other card to the bottom of the deck. If neither card drawn is the Golden Grail, then discard both of them to the bottom of the artifact deck. This bonus can occur only once per location, when the ruin is cleared and its reward claimed.

- City: When a City is defeated during an assault, the player must immediately decide whether to "Loot the City". If the player decides to loot the city, he may draw 4 artifact cards, keep one as a reward and discard the remaining cards to the bottom of the artifact deck. If this reward is taken, then the city cannot be used to recruit any units, you cannot use its special influence action, and it does not provide extra cards when drawing (although while in the city you can draw extra cards based on your Keep bonus, just not for the city itself). If the player decides not to "Loot the City", the choice is permanent and cannot be changed later. The defeated city is then treated as per the standard rules.

Scenario End

The player must find the Golden Grail, and return to the Portal with it in hand (it cannot be in your Deed deck or discard pile). If this is completed before the end of the last round, the player wins the game.

Variants

Easier game: The player must find the Golden Grail before the end of the game. It does not have to be returned to the Portal.

Challenging game: Add 4 wound cards to the artifact deck when shuffling. When drawing artifact cards for a reward (*not* when performing the actions "Search the Ancient Texts" or "Ritual of Scrying", or when finding clues in a Ruin), a wound card represents a spell tome that allows you to select a spell from the Spell offer. For example, if an artifact and a wound are drawn, you may take either the artifact or a spell from the offer. If two wounds are drawn, you must take a (single) spell from the offer as your reward.

Challenging option: If a Monastery is burned, the "Search the Ancient Texts" action is unavailable for the remainder of the game.

Nightmare games: In addition to adding wounds to the artifact deck, increase the level of the city to level 6 or level 8 (or further, if you wish).

LONG NIGHT OF THE DRAGON RIDER

- Credit: Chris Hay
- Expansion required: None
- Length: Seven rounds (3 days and 3 nights, followed by a special night round)
- Purpose: Defeat the Dragon Rider and his army.

For travelers who visit the Portal it is common to see a small crowd of aspiring mages gathering to practice their magic. In the surrounding glade the mana is heavy in the air and the young would-be warlocks and wizards harness it to practice their spells. Mostly this happens to excellent comic effect, with sparks of unsuccessful sorcery flying hither and thither, and creatures nursing singed eyebrows from their failed fireballs. But behind the jovial atmosphere there is a quiet earnestness to the rehearsals, governed by the glowing hole at the center of the glade. One day each of those present hopes to summon enough command of the Source to take the plunge into that hole. That day they will ride the energy to wherever it takes them, returning with heroic tales and relics from far off lands, and that day they will finally be able to call themselves true Mage Knights.

Today, as on most days, you rose before dawn to be the first to arrive. With a few more months of preparations you will be ready to take the plunge, and will be one of the youngest mages to do so. As you approach the Portal an unusual feeling stops you just short of the glade: there is a strange sadness to the way the mana rests in the air. Gazing through the trees you notice that you are not the first to arrive. Sitting in the grass of the glade, clutching her knees to her chest is a dark haired damsel in a red dress.

She is not someone you have seen at the glade before, and the longer you look the more mesmerized you become by her beauty. Regretting your rugged training garb is not more suited to engaging a lady in conversation, you decide to talk to her before any other mages arrive. You approach her with your best smile and - not knowing what else to say - ask her what you would have to do to win her heart. Without a word she immediately bursts into tears and buries her face between her knees. Abashed, you sit down beside her and awkwardly wait.

After a few minutes she turns to you and speaks. "There is but one thing that any creature alive could do to win my heart. The great Dragon Rider and his army ride against the land of my ancestors. In three days they will cross the Portal and burn its cities. There is no one in the land brave enough to lead an army against him, but any man who did would have my heart from now until my dying breath."

Perhaps it is her beauty, perhaps it is the air in the glade magnifying her plight, perhaps it is the yearning for adventure that has always burned within your soul, but you promise the maiden that it is you who will challenge the Dragon Rider at the Portal in three days' time. You kiss her on the cheek, and before you have time to change your mind you plunge headlong into the Portal in the center of the glade. Bright light and colour wash over you and wash through you, shaking you to the bone. You make a vain attempt to control it, but it fills your head until your temples ache.

The light subsides and you find yourself lying on the grass next to the Portal once again. You look up and see the same sun, not rising amongst the trees but shining at you across a dazzling ocean. You sense the same sadness in the air, and know you have come to the right place. The realization strikes of what you have promised to do, and you clamber to your feet still holding your head. You cannot fight the Dragon Rider on your own, but as you set off inland you tell yourself there must be someone in this land who will join you.

Setup

- Map Shape: Open limited to 3 columns
- Countryside tiles: 9
- Core city tiles: 3
- Stack the tiles 5 Countryside — City — 2 Countryside — City — 2 Countryside - City
- Cities: See the special rules.
- Dummy Player: There is one Dummy Player with special rules. Do not place any crystals in the Dummy player's inventory at the outset.
- Place the four city miniatures next to the Dummy Player and set all the dials to zero (the black setting). During the game these dials will represent the armies of the Dragon Rider massing at the magic Portal.

Special Rules

- Deal 3 Tactic cards to yourself and 3 to the Dummy Player. The Dummy Player chooses the middle of the three. You choose from the 3 you have been dealt.
- On the Dummy Player's turn: Reveal one card only. Add a crystal matching the color of the card to the Dummy Player's inventory, unless they already have two crystals of that color. Increase the dial of the matching colored city by the number of crystals of that color in the dummy player's inventory (either one or two). If the city is already on level 11 then this has no effect. Example: The Dummy Player reveals a red card. You look at his inventory and notice there are already two **red** crystals, so you do not add another one. The red city is on level 7 so you increase it to level 9.
- End of the Round: The Dummy Player never announces the End of the Round. If you have no cards remaining in your Deed deck at the end of your turn (after drawing your new hand) you may immediately end the round. The Dummy Player has no further turns. Note this is different from the normal rule of announcing the Round end. Remove all crystals from the Dummy Player's inventory. Do not add any cards to the Dummy Player's deck. Reshuffle the Dummy Player's deck to form a new draw pile.
- Revealing and entering cities: When you reveal a City leave the city miniature by the Dummy Player and treat the City as a printed location on the board. When you enter a City the Guardians of the City challenge you at the gate before you have a chance to explain yourself. If this is the first or second City you have entered then draw two white enemies to fight. In the third City you enter draw three white enemies. These enemies do not benefit from the fortification or the special powers of the City as they are outside the gate. In the moments following the heat of combat you seize the chance to speak of the evil that looms in the south. The guardians hear your words and insist that they will help you in your quest. Discard any of the white enemies you did not conquer, and enter the City. If you managed to defeat any of them you still gain Fame as normal and place a Shield on the city for each token you defeated. Gain +1 Reputation (You did not 'assault' the city so you do not lose a Reputation). Being in or adjacent to a friendly City increases your hand limit by one for each Shield you have on the City. When interacting in a friendly City you receive Influence +1 for each Shield token you have on the City.
- Assistance of the Guardians:
 - In the Blue City you are offered an ancient scroll and a pouch containing rare gems. Gain a spell from the Spell offer and gain a crystal of the matching color to your inventory.
 - In the Red City the Guardians offer you a precious relic of power that has been in the City for many generations. Gain an artifact.

- The White City promises their greatest warrior to travel and battle with you at the Portal. Add three Elite Units to the Unit offer, and then recruit any one Unit for free.
- In the Green City the Guardians offer you a tattered book of sacred knowledge. Gain a skill and an Advanced Action in the same way as if you had just levelled up. Instead of drawing from your own skill pile, draw the two skills from the Dummy Player's pile. If you choose to take a skill from the common offer instead, then you may choose to take one of your own previously discarded skills.
- In the third City you enter the Guardians also offer you and your companions the choice of the best steeds from their stables to hasten your return to the Portal. The value of all movement points you play are doubled until the end of the third Night.
- End of Round six: If you are on the Portal any time during the third Night you may announce the End of the Round even if your Deed deck is not empty. If you have not returned to the Portal by the end of the third Night, count the number of spaces remaining to reach the Portal and add a wound to your discard pile for each remaining space, and then place your figure on the Portal.
- The Final Battle: The Final Battle is a special Night Round that takes place after the third Night Round. The Dummy Player does not participate in the Final Battle. Set aside the Tactic cards, as they will not be required. Reshuffle all of the enemies in the game into new piles. The opening of the magic Portal generates a vast quantity of magic energy, increasing your ability to draw from the Source. Add two additional mana dice to the Source. Each turn still has a movement and action phase as normal. You may not move, but playing movement points could help you with abilities such as Wings of Night. You must spend your action phase in combat, and you may not choose to rest.
- Waves of enemies: The enemies will approach in four waves played over four turns. Take the four city miniatures and arrange them in order of lowest to highest level. If there are multiple cities with the same level, randomly choose the order of them. Take the enemies pictured on the first city and reveal them. Each wave consists of battling all of the currently revealed enemies. The enemies are not fortified unless they have a fortification symbol on their token, and do not benefit from bonuses on any City card. For each of the second, third and fourth waves, add the enemies pictured on the city's dial to any enemies that were not defeated from the previous wave. If you have not defeated all of the enemies at the end of the fourth wave you may continue with additional turns fighting the remaining enemies. You should have enough cards in your deck for about 5 turns.
- The Dragon Rider: In the fourth wave one of the white enemies revealed will be the Dragon Rider. Randomly choose one of the white tokens and draw a red token to place next to it. These two tokens are considered to be one enemy. Add their values together to determine the strength of attack and their armor value. If a fortification, special ability, resistance, or element of attack is present on either token then the Dragon Rider has it.

Scenario End

If you are knocked out in combat at any point in the final battle then you lose the scenario. You also lose if you reach the end of the 7th Round and there are still enemies left undefeated. You win by defeating all the enemies in the final battle without being knocked out.

BALANCE OF POWER

- Credit: Justin M
- Expansion required: Lost Legion and Shades of Tezla or Krang
- Length: Open
- Purpose: Solitaire game that brings in various Mage Knights as allies to fight one Antagonist Mage Knight.

Four Mage Knights have installed themselves as City leaders in the Atlantean Empire, but there is an uneasy balance of power between them. The Council has sent you to make sure that no single Mage Knight becomes too powerful.

Setup

- Map Shape: Open limited to 3 columns
- Countryside tiles: 5
- Core city tiles: 4
- Core non-city tiles: 2
- Cities: All Cities start at Level 2 but their level can increase during the game.
- Lay out the four City cards on the table and place the Round Order token of the City leader on the top left of the card: Norowas on the White City, Tovak on the Blue City, Arythea on the Red City, and Goldyx on the Green City.
- Dummy Player: Use the Deed deck of Braevalar, Krang, or Wolfhawk. Add to it 16 wound cards and the four competitive spells (17-20).

Special Rules

- When taking Tactics, you choose first, then the Dummy Player. The card you choose is removed from the game but the Dummy Player's Tactic card is not.
- Do not add any skills to the common skill pool when you level up.
- The Council has given you a rough indication of where the Cities are located. When you reveal a Core city tile, you can exchange it for whichever color City you want.
- When you conquer a City, you gain the support of the hero who was controlling it. Put two of their skills into the common skill pool (this happens before you resolve any level ups). Then choose one of their unique action cards and swap it with your own version of the card. For example, you could replace your standard Rage (card 1) with Arythea's Battle Versatility once you conquer the Red City. You replace the card regardless of whether it is in your hand, Deed deck, or discard pile. If it is in your Deed deck, replace it and then shuffle your deck.
- On the Dummy Player's turn, draw a card from their deck. You do not reshuffle the deck at the end of the Round – just keep drawing cards.
- The game has two 'Acts'. Act Two begins as soon as the Antagonist is identified.
- During Act One, the Dummy Player cards are resolved as follows:

- If you draw a wound, nothing happens.
- If you draw a red action card, put one of Arythea's Shield tokens on the Red City card.
- If you draw a blue action card, put one of Tovak's Shield tokens on the Blue City card.
- If you draw a green action card, put one of Goldyx's Shield tokens on the Green City card.
- If you draw a white action card, put one of Norowas's Shield tokens on the White City card.
- If you draw a spell, put two Shield tokens on the corresponding City card instead of one.
- As soon as one character has three Shield tokens on their City, they assassinate the Emperor, install themselves as autocrat, and become the Antagonist. Act Two begins. At this point (and this point only), remove all wounds and cards of the Antagonist's color from the Dummy Player's discard pile, and then shuffle the remaining cards back into their deck. Put one of the Antagonist's Shield tokens onto their Round Order token to mark that they are the Antagonist, and then put their remaining Shield tokens back into the supply. The Antagonist's City immediately becomes Level 10. Each remaining City is of level 2 + the number of Shield tokens they accumulated during Act One. If you had already conquered a City at Level 2 then that City is not affected.
- During Act Two, the Dummy Player cards are resolved as follows:
 - If you draw a wound, nothing happens.
 - If you draw an action card of the Antagonist's color, the Antagonist gathers their strength. Put a crystal of that color on their City card.
 - If you draw an action card that is not of the Antagonist's color, the Antagonist's influence spreads to that City. Put one of the Antagonist's Shield tokens onto the corresponding City. Put an additional Shield token onto the city for each crystal that the Antagonist has accumulated, and then return the crystals to the supply. However, if the Antagonist has already seized control of this city (see below), nothing happens.
 - If you draw a spell, treat it as two action cards of that color.
 - If the Dummy Player runs out of cards, do not reshuffle the discard pile. Instead, roll a mana die and resolve it as if you had drawn a card of that color. If you roll **gold** or **black**, put one of the Antagonist's Shield tokens on every other City.
- As soon as the Antagonist has a supermajority of 4 Shield tokens on a City, they seize control of that City. For example, suppose the Blue City has one of Tovak's Shields (from Act One) and two of the player's Shields (because you conquered the City at Level 3). Then the Antagonist seizes control of the

City if they have 7 of their shields on it (1+2+4). When the Antagonist seizes control of a City the player is no longer welcome there. The City can no longer be conquered or entered. If you are in the City at the time, the Antagonist orders the guards to throw you out to any adjacent Safe Space. Remove the Round Order token from the City to show that the original leader has been ousted, and return the Shield tokens to the supply.

- A newly-controlled City then sends reinforcements to the Antagonist's City. You add an extra enemy token face down to the garrison of the Antagonist's City (or face-up if you are adjacent to the City):
 - The Blue City sends a purple enemy.
 - The Red City sends a brown enemy.
 - The Green and White Cities send a grey enemy.

Scenario End

If you conquer the Antagonist's City, you win the game. If the Antagonist seizes control of the other three Cities, the Antagonist is drunk with power and you lose the game.

Scoring

Take your Fame as the base and apply standard Achievements scoring, except no titles are awarded. Do not apply the Cooperative or Solo Scenario bonuses found on the reverse side of the scoring card. Instead:

- Score 5 points for each City you conquered other than the Antagonist's City. While not a specific goal of the scenario, you will want to conquer at least one of the Cities to get the bonus and to prevent the Antagonist from seizing control too quickly, since conquering a City allows you to put two or three of your Shield tokens onto it.
- Score 30 points if you defeated the Antagonist.
- Score 2 points for each card remaining in the Dummy player's Deed deck.

Variants

Volkare as Antagonist. This variant would potentially allow you to recruit all four heroes. There is no 'Act One': the Antagonist is already known and it is Volkare. The Council has sent you to unite the squabbling Mage Knight leaders to confront him. Resolve the cards using the Act Two rules immediately. The four normal cities are always of Level 2. In the setup, add Volkare's camp instead of one of the Core non-city tiles. Volkare is Level 8 rather than Level 10 (unless you want it to be harder, of course). Also add 4 extra wounds to the Dummy Player's deck during set-up (i.e. 20 wounds + 16 action cards + 4 spells). Use any character's Shield tokens (or some replacement tokens) to represent Volkare's shields.

WARS OF THE SUN AND THE MOON

- Credit: Javier Plaza
- Expansion required: Lost Legion
- Length: See Scenario End
- Purpose: High Priestess of the Sun rules the White City, while the High Priestess of the Moon rules the Blue City. Find them both and defeat them, before the war ruins the land.

After the Breaking 32 years ago, desperate people found comfort in the cults of both the sun and the moon. For many years, these cults helped the poor and the weak, healed the broken lands, and there was peace. These cults and their priestesses worked together as a sisterhood. Until they found something among the remains of the Atlantean empire, that was not meant to be found by mortal men. Until they found forgotten texts written with blood, and spoke forbidden words in the day of the eclipse. Until today. The High Priestesses of the Sun and Moon have taken absolute power in their cities and started a war that makes the land bleed. There is only one hope to heal the land. The Mage Knights. You.

Setup

- Map Shape: Wedge
- Countryside tiles: 6
- Core city tiles: 2 (White and Blue Cities). Both cities start at Level 1 and gain a level at the beginning of each Round (starting with Round two). As soon as the first city is conquered, the remaining city gains two levels at the beginning of each Round.
 - If a City has been partially conquered and lost one or more of its defending enemies, the City recovers one of these enemy tokens (pick randomly) instead of gaining a level (see the special rule "Impressment" below). If the City should gain two levels and has lost only one enemy token, then recover the token and gain one level only.
 - The Monastery standing next to the Blue City is burnt. Treat it as an empty plain, with its normal terrain cost to enter
 - In addition to standard rewards for defeating the Cities, upon conquering the White City you gain the Amulet of the Sun, and upon conquering the Blue City you gain the Amulet of Darkness. Set aside both artifacts at the beginning of the scenario.
- Core non-city tiles: 3
- Take a Core city and a Core non-city tile, shuffle them together, and place them at the bottom. Take one random Core non-city tile, and put it on top of the above. Take the remaining Core city and Core non-city tile, shuffle them together and put them on top of the above. Take all Countryside tiles, shuffle them together and put them on top of the above. Draw the first two tiles from the pile and place them along with starting tile (side A).
- Dummy Player: There is no Dummy player.

Special Rules

- You may select any Tactic for the Day (in a Day round) and for the Night (in a Night round), but once the Round is over, remove them from the game (each Tactic can only be used once). If you start a Day or Night Round and there are no Day or Night Tactics left, you are forced to play without a Tactic. However,

you can choose to play any particular Round without any Tactic, even if there are still Tactics available.

- Assaulting the Cities does not impact Reputation.
- Training: In order to take on this challenge, your master at the Council of the Void taught you a few lessons. Before choosing your character for the game, pick another character as your master and choose any of their skills (excluding the interactive skill). Remove the interactive skill from your own skill set, add the skill selected from your master and shuffle the pile and put it face down. Whenever you gain a skill out of a level up, take the top two skills from the pile, pick one and discard the other.
- Impressment: Whenever an enemy defending a City is eliminated as a result of a City assault, this enemy token is *not* removed from the game, but instead placed face down on its City card. Face-down enemy tokens do not affect combat, and the City can be conquered normally by eliminating all of its active (face-up) enemies.
- Curse of the Sun: During the day, the power of the High Priestess of the Sun burns the land with extreme heat. At the beginning of any turn of a Day Round, draw the top card of your Deed deck and discard it. If you have no cards remaining in your Deed deck at the beginning of your turn, you must declare End of the Round even if you still have cards in hand. The curse can only be lifted by conquering the White City. End of the Round must be declared after the turn in which the curse is lifted.
- Curse of the Moon: During the night, the power of the High Priestess of the Moon freezes the air with extreme cold. At the beginning of any turn of a Night Round, take a wound to your hand (the wound does not count towards Knock Out should you enter combat this turn). In addition, while the Curse of the Moon is active, lakes are frozen and can be entered at a move cost of 3. Frozen lakes are not considered safe spaces and thus you cannot end your movement on one. The curse can only be lifted by conquering the Blue City. End of the Round must be declared after the turn in which curse is lifted.
- Unleashed Power: As soon as one of the Cities is conquered and its curse lifted, the remaining curse grows stronger, and the City rushes to achieve ultimate power.
- Curse of the Sun (strong): Apply immediately after the Curse of the Moon is lifted. Until the end of the game, there will be Day Rounds only. At the beginning of any turn of a Day Round, draw two cards from your Deed deck, discard the first and remove the second from the game. If you have no cards remaining in your Deed deck and are not in a Safe Haven (see special rule below) at the beginning of your turn, you must declare End of the Round, even if you still have cards in hand.
- Curse of the Moon (strong): Apply immediately after the Curse of the Sun is lifted. Until the end of the game, there will be Night Rounds only. At the beginning of any turn of a Night Round, take one wound to your hand (these do not count towards Knock Out should you enter combat this turn) and another wound to your discard pile. Lakes are frozen.
- Endurance Deck: for every card you discard or throw away due to Curse of the Sun, and for every wound you take (to your hand or discard pile) due to Curse of

the Moon, put a wound aside and create a pile. This pile will be used for scoring purposes only, showing how much you endured the curses (you can use any other alternate way for counting this, if you do not want to mess up with cards).

Scenario End

The scenario ends when both Cities have been conquered, or when either City reaches level 12+.

Scoring

If you conquer both Cities (and remove the heads from the shoulders of both of the High Priestesses), you win. If either City reaches level 12+, you lose. In order to count your score, take your Fame as a base and apply only the special scenario Achievements below:

- Notoriety: When you win (and only then), people will realize what you have done. Take your Reputation bonus (unmodified), multiply by 5 and add it to your Fame. If your Reputation is negative, subtract the result from your Fame instead.
- Endurance: Only a true hero can endure what others cannot, and still be victorious. Count the number of wounds in the Endurance Deck (See Special Rules) and earn 2 Fame for each.
- Time is Life: Every day the High Priestesses grew in power, people died. Every day mattered and your quickness saved lives. Sum up the levels of both Cities when you conquered them, and subtract it from 20. Multiply the result by 10 and add it to your Fame (example: if you take the Blue City at level 5 and the White City at level 8, you are 7 points off 20, so you add 70 to your Fame).
- Leadership: Your Units are proud to be part of such a victory, and will spread your name over the lands. Sum the Unit level of all your Units (if wounded, halve it, rounded down) and add the total to your Fame.

Variants

Safe Haven: If you start a turn in a Village, Monastery or a City you control, you are *not* affected by any of the curses that particular turn, providing you pay 1 mana of any basic color at the beginning of that turn. This optional rule lowers the difficulty so you should add 2 to the Cities levels to start with.

Cooperative Play: Add extra map tiles matching the total number of cooperative players in the game. In a two-player game, add 1 Core non-city tile between the two Cities (see set up) and 1 Countryside tile. In a three player game, add 1 Core non-city tile between the two Cities and 2 Countryside tiles.

Game Balance: In order to adjust difficulty, please follow the chart below to set city levels at the beginning of the game.

CITIES LEVEL	
Easy	1
Normal	2
Hard	3

If you are using the Safe Haven optional rule, add 2 to the numbers above. If you are playing Cooperative mode, add 1 to the numbers above per extra player.

MAGE OF THE RINGS

- Credit: Gary Kressner
- Expansion required: None
- Length: Five rounds (3 days and 2 nights)
- Purpose: Climb Mount Doom, defeat Gollum, and cast the Great Ring you were cursed to possess into the fires of Mount Doom - freeing yourself from the iron grip of Sauron's control.
 - Solo / Cooperative Goal: Destroy one of the Great Rings before time runs out!
 - Competitive Goal: Be the *first* to destroy the Great Ring you were cursed with!

The world is changed. I feel it in the water. I feel it in the earth. I smell it in the air. Much that once was is lost, for none now live who remember it. It began with the forging of the Great Rings. These were gifted to the Mage Knights, who, above all else, desire power. But they were, all of them, deceived, for another ring was made. In the land of Mordor, in the fires of Mount Doom, the Dark Lord Sauron forged in secret a Master Ring, to control all others. And into this ring he poured his cruelty, his malice and his will to dominate all life. One Ring to rule them all!

Setup

- Map Shape: Spiral configuration consisting of 5 Specific tiles, and 5 random Countryside tiles (see graphic). The sequence is A / Random / Random / Blue City / Random / White City / Random / Green City / Random / Core 4
 - The Shire: Portal of Starting Tile A
 - Eriador: 2 Random Countryside tiles
 - Rivendell: Blue City (Friendly)
 - Mines of Moria: 1 Random Countryside tile. Place the Balrog (a purple Fire Golem token) face down in the center.
 - Minas Tirith: White City (Friendly)
 - Ithilien: 1 Random Countryside tile
 - Minas Morgul: Green City (Hostile, Level = Number of Players + 2)
 - Plateau of Gorgoroth: 1 Random Countryside tile. Place Shelob (brown Medusa token) face-down in the center.
 - Mount Doom: Core Tile 4. Place Gollum (green Digger token) face-down in the center.
- Tile Orientation: Disregard Tile Orientation match-up symbols. Always place tiles so that they are oriented with their art facing normally in an upright position.
- Dummy Player: There is one standard Dummy player, Goldyx: the Nazgul!
- Locate the 4 Mana Ring Artifacts, which represent the Great Rings of power. Shuffle them, and deal one to each player face down. The players shuffle these artifacts into their Deed decks. Players will not know which Ring they possess until they have drawn it for themselves during the normal course of play. These Artifacts may *only* be used for their Weak Power, as they can never be destroyed by ordinary means.

Special Rules

- Tactics are *not* used in this scenario, as the Great Ring

- Artifacts already give the player a strategic advantage!
- Friendly Cities: Treat as if owned (+1 hand size when occupying or adjacent).
- Lakes are treated as marshes for purpose of movement.
- Rampaging Draconum are treated as Rampaging Orcs instead.
- Named Creature Tokens are initially deployed face down, and only turned face up when adjacent. These creatures are also considered to be rampaging, so they are impossible to bypass; however, unlike normal rampaging enemies, you gain no Reputation bonus for their defeat. Finally, where placement of these Named Creature Tokens conflict with what the board specifies, these Named Creatures take priority.

Special Story-Driven Rules and Events

- Reveal of Random Tile #2 – And So It Begins: Spawn a pack of Warg Riders (green Wolf Riders token) directly east of the player who revealed Tile #2, and trigger the appearance of the Nazgul!
- Nazgul: Place the Nazgul (red High Dragon token) face up on The Shire. The Nazgul moves one space directly towards the closest player at the end of every Dummy Player turn except the first. If the Nazgul is adjacent to a player, battle is engaged immediately. Should the Nazgul be defeated, immediately spawn a new Nazgul at the nearest Rampaging Draconum site.

- Rivendell: Once Rivendell is reached, your only reward is to breathe a sigh of relief, and mayhap learn a spell from the Elves!
- Minas Tirith: Occupation of the White City triggers the availability of Elite Units when the Unit Offer is next refreshed.
- Core Tile 4 – Gollum: Gollum cannot be fought from an adjacent space. The final Assault on Mount Doom requires 7 Movement points to move onto the same space as Gollum. Killing Gollum lets you remain on the Mountain space, while failure requires retreat to re-attempt next turn. Reputation will be critical in this confrontation, as each point of negative Reputation counts as 2 extra points of Armor for Gollum. You may not use Units in this battle, as each Mage Knight must face Gollum alone. Also, each Mage Knight is required to Block Gollum's attack. Any damage from Gollum means he wins.
- Just Throw It In! – Finally, to break the hold of the Great Ring over the Mage Knight, and summon enough willpower to cast it into the fires of Mount Doom, the Player will be required to generate Influence = Player Level × 2. Units may offer their help, and Reputation comes into play once again.

Scenario End

Scoring in this Scenario is irrelevant – it's either win or lose – regardless of the variant you play.

THE CHAOS RIFT

- Credit: Jim Norris
- Expansion required: Lost Legion
- Length: Six rounds (3 days and 3 nights)
- Purpose: Seal the Chaos Rift before it is too late.

One of the last great Mages of the Empire, Malakov, planned a masterstroke that would turn the conflict against the Council of the Void back in his favor. He made an attempt to open a gateway to the Realm of Chaos, and summon vast armies of its denizens to do his bidding. Alas, the magic involved was much too strong to control, and Malakov was destroyed. A chaotic rift was left behind from which monstrosities began to pour forth into the countryside. Inside Malakov's once great city, the rift is growing... soon no magic will be able to control it. Hearing rumors of this event, the Council dispatched you to scout the area and report back. You found a realm wracked with terror and destruction. Quickly gathering information, you prepared to return with your findings, only to find the Portal now inert. It appears there is no way to open it. As the sun rises over the cliffs, only one option remains: seal the rift before you are destroyed, and an even worse catastrophe befalls the world you leave behind...

Setup

Special Setup Note: Divide the Countryside tiles into two categories. Select the specified number of each, then shuffle them together in one stack (so that all Countryside tiles are drawn prior to Core tiles):

- 1) Knowledge sites (tiles that contain either a Monastery or a Mage tower).
- 2) Wilderness sites (tiles that contain neither a Monastery nor a Mage tower).

- Map Shape: Wedge
- Knowledge site tiles: 4
- Wilderness site tiles: 3
- Core city tiles: 1 (always place the Red city at the bottom of the stack, so it is the last tile drawn).
- Core non-city tiles: 2
- Cities: The city when found has a Level of 4.
- Dummy Player: There is one standard Dummy.
- Cards and skills: See rules for Solo Conquest.
- Scouting: Reveal one additional tile during Setup because of your initial scouting of the area.
- Chaos Flux: There is one extra die available in the Source due to the flux of the Chaos Rift.
- Red City: The city when found has a Level of 6. When assaulting the city, add one additional brown token to the defenders. Due to the destructive effects of the Chaos Rift do not treat the defenders as fortified. As the city is ruined, you may not conduct Influence actions while in the city.
- Spell deck: Search the deck and set aside the Time Bending spell. Shuffle the remaining spell cards, and place them on top so that the Time Bending spell is the bottom card in the deck.
- Artifact deck: Search the deck and set aside the Amulet of Sun. Shuffle the remaining artifact cards, and place them on top of the Amulet (so that the Amulet of Sun is the bottom card in the deck). As a free action to start the game, you may draw 4 artifact cards and discard one back to the top of the artifact deck and the remaining three to the bottom of the deck. This represents information you collected from fleeing refugees during your initial scouting mission.
- Important Note: This scenario is balanced using a 24 card artifact deck which requires the Lost Legion expansion. If you have only the base game, add 8 wound cards to the artifact deck. See the notes below on the Challenging game for handling wounds in the artifact deck when receiving a reward (be aware this will be more difficult than the standard game).

Special Rules

- Tactics cards are handled identically to the Solo Conquest scenario.
- Quest for the Ritual: When receiving a spell as a reward, or purchasing one via an Influence action, you may throw the spell away to search the deck for the spell Time Bending. This spell is then available for the remainder of the game (in addition to the normal Spell offer) and can be claimed the next time the player receives a spell as a reward. The Time Bending spell may not be purchased via an "Influence" action.
- Unit offer: As there are no cities available for recruiting, if a unit appears in the offer that may only be recruited in a city, you have the option to discard that unit and replace it in the offer with a regular (silver) unit instead. For this scenario, units that normally are available in Villages may be recruited from a Keep instead.
- Village: The Villages of this province have been burned and pillaged. There is nothing to be gained by visiting them, and dangerous enemies still lurk there. When revealed, place a monster token (one brown token on a Countryside tile, two brown tokens on a Core tile) on the Village. Treat these enemies exactly the same as rampaging monsters.
- Keep: The last terrorized inhabitants of this land hide inside these fortifications. They represent potential allies, but terror and paranoia may make them hostile. Keeps are always hostile when entered at night; resolve the assault per the standard rules. During the day, you may attempt to "Negotiate" with the Keep and demonstrate that you mean to aid them. To do this, take an "Influence" action as your action for the turn to "Negotiate". Spend 8 Influence to complete this action. Remove the defending token from the game and place a Shield on the location. You may also select a free Unit from the Unit offer (which can be recruited from a Keep or Village) that wants to assist you in sealing the Rift. The "Negotiate" action cannot be used on a Keep that has already been claimed, via either a "Negotiate" action or an assault.
- Monastery: At a Monastery, during an "Influence" action, you may spend 4 Influence to "Search the Ancient Texts" for clues to an artifact's location. Draw 3 cards from the artifact deck. Discard 2 of the cards to the bottom of the Artifact deck, and return one to the top of the deck. This action may be performed only once per location per game; mark the location with a crystal to indicate this once it has been used. *Special exception:* If a Monastery is burned that has had "Search the Ancient Texts" performed on that location, the player draws only one artifact card as a reward (rather than choosing between two).
- Mage Tower: At a Mage Tower, during an "Influence" action, you may spend 4 Influence to perform a "Ritual of Scrying". In addition, you may also fuel the ritual with up to 3 additional mana. Draw 2 artifact cards, plus one additional card per mana spent. Discard one of the cards drawn back to the top of the artifact deck, and the remaining cards to the bottom of the deck. In addition, if you spent mana as part of the ritual, you may explore one tile adjacent to the tile in which you are currently located for free. This action may be performed only once per location per game; mark the location with a crystal to indicate this once it has been used.
- Ancient Ruins: Ruins may hold important clues about ancient artifacts. If you clear a Ruin that *does not include an artifact as a reward*, you may draw two cards from the artifact deck. If one of the artifacts is the Amulet of the Sun, you may return it to the top of the artifact deck, and discard the other card to the

bottom of the deck. If neither card drawn is the Amulet of the Sun, then discard both of them to the bottom of the artifact deck. This bonus can occur only once per location, when the Ruin is cleared and its reward claimed.

- The Red City: The Chaos Rift lies in the rubble of the Red City. When placing the tile, place a Draconum token on the Mine in addition to the other two locations. Also, place brown tokens on the two remaining empty locations around the city. All enemy tokens on this tile are treated as rampaging monsters, and also gain the city's special power due to the proximity of the Rift (Physical attacks gain the brutal ability). Do not treat the Red City's defenders as fortified when conducting an assault.
- Sealing the Rift: To seal the Rift, the player must enter the Red City and perform a "Ritual of Sealing" as their action for the turn. The "Ritual of Sealing" requires the following:
 - The Ritual must be performed while located in the Red City during a Night round.
 - Cast the spell Time Bending. Ignore the normal casting cost of the spell. Instead, the ritual is cast by using one **black** mana and one **gold** mana (requiring the Amulet of the Sun), as well as a total of 11 additional mana that includes at least one mana of each basic color

Scenario End

If the "Ritual of Sealing" is completed before the end of the last round, then the Rift is sealed and the player is victorious.

Variants

Chaos Demons (challenging): All rampaging monsters (including rampaging enemies unique to this scenario as well as the defenders of the Red City) are denizens of the Realm of Chaos whom arrived via the Rift and have dangerous abilities due to their origin. After engaging any of these enemies, but prior to resolving combat, roll a mana die for each enemy (if there are more enemies than available dice, use mana tokens to identify the result for each enemy). The enemy gains the following bonuses based on the result:

- **Red:** +1 Attack
- **Green:** +1 Armor
- **Blue:** Sorcery – Enemy attacks prior to the player in the Ranged attack phase (this attack can be blocked).
- **White:** Illusion – You may not use Units to attack or block this enemy.
- **Black:** Curse – When this enemy is defeated, take one Wound into your discard pile.
- **Gold:** Elite – +1 Attack and +1 Armor, +1 fame when this enemy is defeated.

Challenging Quest: Add 4 wound cards to the artifact deck when shuffling. When drawing artifact cards for a reward (not when performing the actions "Search the Ancient Texts" or "Ritual of Scrying", or when finding clues in a Ruin), a wound card represents a spell tome that allows you to select a spell from the Spell offer. For example, if an artifact and a wound are drawn, you may take either the artifact or a spell from the offer. If two wounds are drawn, you must take a (single) spell from the offer as your reward.

Challenging option: If a Monastery is burned, the "Search the Ancient Texts" action is unavailable for the remainder of the game.

Nightmare games: In addition to adding wounds to the artifact deck, increase the level of the Red City to Level 8 or Level 10, or make it a Megapolis.).

4. CAMPAIGNS

• Credit: Javier Plaza

A campaign is a series of scenarios played in a specific order. At the end of each scenario (after scoring), your Mage Knight can spend Fame on rewards to take into the next scenario. All crystals remaining in inventory, Advanced Actions, spells, and artifacts won in a scenario are eligible to be purchased with Fame. One Unit may also be purchased. Rewards are selected with Fame according to the accompanying purchase cost chart.

All crystals, Units, Advanced Actions, spells, and artifacts not purchased with Fame are lost and shuffled back into their respective decks Wounds, either on your Mage Knight or a purchased Unit, are not carried into the next scenario and thus are put back into the wound deck. All unspent Fame after selecting rewards is lost.

When you start a scenario (other than the first), you are at Level 1 with zero Fame and Reputation, but you will add the Advanced Actions, spells and / or artifacts you purchased with Fame at the end of previous scenario to your Deed deck (along with your basic 16 action cards).

If you selected a Unit, the Unit can go directly into your play area under your initial command token. Additionally, you will add any crystals you purchased with Fame at the end of the previous scenario to your starting inventory.

Carry forward gives you a boost with which to start the next scenario, which allows you (potentially) to gain even more Fame, and that Fame will be used at the end to select more (or stronger) rewards for upcoming scenarios. This mechanic fits into campaigns designed with increasingly difficult scenarios, in which you start with small, short scenarios that prepare you to take on more epic challenges.

In addition, scenario performance is no longer only about winning or losing. How well you perform in a scenario matters: a win scoring 57 Fame is not the same as a win scoring 70 Fame, which allows you to select greater rewards. Therefore, you might have big troubles in the end scenarios if you did not perform well enough earlier, or if you did not properly select your rewards. Plan ahead.

Is it possible to bring a particular reward (a spell, or artifact, etc.) from the beginning to the end of the campaign? Absolutely yes, providing you spend the required Fame at the end of each scenario to take it with you.

FAME POINTS	REWARD
5(#)	Crystal (in inventory)
10(*)	Unit
15	Advanced Action
25	Spell
40	Artifact

(#) The cost is per crystal you have in inventory that you want to keep for the next scenario.

(*) The cost of selecting a Unit is per Unit level. For example, you will need to spend 20 Fame if you want to keep a Level II Unit.

TOTAL WAR: OVERVIEW

- Credit: Javier Plaza
- Expansion required: None
- Purpose: The objective of Total War is to conquer all the lands through a campaign rather than a single scenario, and put the lands under the supreme rule of the Mage Knights. There is no storyline involved or significant differences between the scenarios, other than increasing difficulty. However, there are some mechanics and decision-making that are relevant for the campaign and are explained below.

All four Cities are used in the campaign, one of them being friendly and the other three being the targets to be conquered in the three scenarios. At the beginning of the campaign, you choose which City will be friendly, and in which order you will take on the enemy Cities. For example, you may pick the Blue City as friendly, and then take on the White City first, the Red City second, and the Green City last, or any other combination you choose for the campaign. You choose in which scenario the friendly City you have selected will show up.

The number of Rounds of each scenario and the enemy City strengths are fixed according to the accompanying chart. One of the keys to winning this Total War in the

long term will be your ability to pick your rewards thinking of the challenges ahead, and planning to take the Cities in a particular order.

Special Campaign Rules

- Area of influence: All Cities control the region around them, and dedicate forces to garrison locations and patrols. To reflect this, all enemy tokens in a scenario gain the benefit granted to units garrisoned in the enemy city (i.e. if you are facing the White City, all enemy tokens you fight throughout the entire scenario will have +1 Armor). Fortification is not automatically granted to enemies outside of the City.
- Better friends than foes: You may add your friendly City to one (and only one) of the three scenarios. To do so, shuffle its City tile in along with all other Core map tiles for the scenario. If you do it at Vidi or Vici, add also one extra Core non-city tile. You must pick your friendly City at the beginning of the campaign, but you can decide when to include it right before setting up a given scenario.

SCENARIO	ENEMY CITY LEVEL	ROUNDS
Veni	10	4
Vidi	20	5
Vinci	30	6

Scenarios

- 1) Veni
- 2) Vidi
- 3) Vici

Variants

If you want to add some randomness, you may pick your friendly City randomly, rather than selecting it.

Enemy city levels are arbitrary. If you find the scenario too easy or too hard, feel free to adjust to your liking.

Sneak attack: All scenarios start with a Day Round by default. Instead, you may start all scenarios with a Night Round. This is a bigger challenge in the first Round, and also attacks on Cities in the last Round of the scenario are likely to be a Day Round, not allowing the casting of strong spell effects.

TOTAL WAR: 1) VENI

- Length: Four rounds (2 days and 2 nights)

Setup

- Map Shape: Wedge
- Countryside tiles: 7
- Core city tiles: 1+. Pick any enemy City. You may add your friendly City tile as well, if you choose.
- Core non-city tiles: 3
- Cities: Level 10
- Dummy Player: There is one standard Dummy player.

Special Rules

- Unless otherwise specified, all rules are the same as Solo Conquest, including Tactic cards.

Scenario End

The scenario ends immediately as soon as you fully conquer an enemy City. You cannot make use of the resources of the conquered City. If you achieve this within the scenario time limit, you win. If you do not, you lose.

Scoring

Scoring is the same for all three scenarios of the campaign. Take your Fame as the base and apply standard Achievements scoring, except no titles are awarded. Also, do not apply the Cooperative or Solo

Scenario bonuses found on the reverse side of the scoring card). Instead:

- Score 15 points if you revealed and entered your friendly City.
- Score 15 points if you took down the enemy City in a single assault.
- If you finished the game one or more Rounds before the limit, score 30 points for each such Round.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.

TOTAL WAR: 2) VIDİ and 3) VICI

- Length: Five or six rounds (Vidi: 3 days and 2 nights; Vici: 3 days and 3 nights)

Setup

- Setup rules are mostly the same as Veni.

- Core city tiles: 1+. Pick an enemy City that has not yet been chosen. You may add your friendly City tile as well if you have not yet used it.
- Core non-city tiles: 3+. Add an extra Core non-city tile if you are including your friendly City.

- Cities: Vidi: Level 20; Vici: Level 30

Special Rules, Scenario End, Scoring

- All rules are the same as in Veni.

DRAKES!: OVERVIEW

- Credit: Javier Plaza
- Expansion required: None

Special Campaign Rules

- Hidden snakes: For the first two scenarios, every time you should face a Draconum enemy token on the map (rampaging enemies, revealed Ruins), draw an Orc Marauder token instead for a rampaging enemy, or a brown enemy token instead for Ruins. If Orcs

appear on a lake, they are what you think they are: Pirates!

Scenarios

- 1) A Menial Task
- 2) Flight from the Fire
- 3) A Steep Counterattack

Variants

As the campaign is strongly dragon and fire themed, you can remove Ice and Storm dragons from the Draconum enemy tokens pile (if you are playing with the Lost Legion expansion) throughout all scenarios. Take into account that this somewhat lessens the difficulty.

DRAKES!: 1) A MENIAL TASK

- Length: Four rounds (2 days and 2 nights)
- Purpose: Orders are to travel to the Red City and spend an action there (to find the contact of the Council of the Void). However, upon getting there you will find the City is not friendly anymore, so the purpose of the scenario becomes to investigate what has happened.

"May I ask you, Lord Commander, why don't you send one of our low rank officers? I have completed my training as a Mage Knight and wish to ap..."

"Hold your tongue! I wonder how you completed your training and yet you dare to question my direct orders. I hope you learned where the city of Zamora is?" The Lord Commander spoke while staring at papers on his table, some in a language older than the apocalypse.

"Yes, sir, it is located in the desert of Gor."

The Lord Commander looked at you now. "Good. Our contact in the city has stopped sending reports, and its governor is a weakling that cannot be trusted to hold the border of the empire against an army of ants. You will head to Zamora, locate our contact, and send a detailed report to me. Then, come back immediately. Is

that clear?"

"Yes, sir. May I be allowed to pass by the capital on my way back? It is only two days away from Zamora." Hope shines through your eyes: the capital (known as the White City) is full of emotions and thrill that you and your friends do not have any access to while studying here.

"No," answers the Lord Commander. "First you will complete this task, and afterwards your master will decide."

Setup

- Map Shape: Wedge
- Countryside tiles: 7
- Core city tiles: 1 (Red City)
- Core non-city tiles: 3
- Stack the map tiles with the Countryside tiles on top, the three Core non-city tiles next, and the Red City tile at the bottom of the stack.
- The Red City has been attacked and now is under the rule of the Draconum. Replace each of the City enemy tokens (white) with a Draconum enemy token, and each of the non-city enemy tokens (anything non-

white) with an Orc Marauder enemy token.

- Cities: Level 30
- Dummy Player: There is one standard Dummy player.

Special Rules

- Unless otherwise specified, all rules are the same as Solo Conquest, including Tactic cards.
- This scenario has a special action, "Investigate". If you end your movement adjacent to the Red City, you may use "Investigate" to learn what has happened to the Red City and its garrison.

Scenario End

If you learn about the Red City and its garrison within the time limit of the scenario (2 days and 2 nights), you win. Otherwise, you lose. If you win the scenario, you may play one last turn, unless End of the Round has been called already.

Scoring

Take your Fame as the base and apply standard Achievements scoring, except no titles are awarded. Do not apply the Cooperative or Solo Scenario bonuses found on the reverse side of the scoring card.

DRAKES!: 2) FLIGHT FROM THE FIRE

- Length: Three rounds (2 days and 1 night)
- Purpose: Reach the capital as quickly as possible and warn the king about the loss of Zamora and the incoming Draconum invasion.

As you come close to the city, you notice orc patrols guarding the gates, and columns of black smoke rising from many of its buildings. Several parts of the walls are burnt and blackened, and loose stones fall from the top now and then, but what gives you goose bumps is the intense stench of sulfur in the air. Strangely, there is nobody outside the city, so it is easy for you to come by a worn, half-hidden, large wooden gate used for carts taking supplies in and out the city. The door is closed, but heavily damaged, so after a while you find a breach wide enough for your head and peek in.

What you see freezes you in place and makes your heart stop pumping. Drakes! There are dragons everywhere, of all sizes and colors, either flying or just resting lazily on top of rubbish and destroyed buildings among hundreds of fires. And an invading army, getting ready for war! Arranged in the middle of a flattened neighborhood are the tents of an army of orcs. The king must be warned! You will need to travel to the capital so the realm can prepare its defenses against the invasion, before it's too late.

When you are about to sneak off, a pair of green, beast-like eyes meets yours from inside the city. The alarm has sounded, and you do the only thing that can be done. Run.

Setup

- Map Shape: Wedge
- Countryside tiles: 7
- Core city tiles: 2 (Red City and White City)
- Core non-city tiles: 2
- At the start of the scenario, set aside the Red City card and place 5 red crystals on it. Add one red crystal to the City card at the beginnings of the second and third Rounds (see special rule "Chased").
- The Portal map tile is not used in this scenario. The starting map tile is the Red City tile, plus the two random Core non-city tiles oriented per map tile numbers.
- For the remaining map tiles pile, place the White City at the bottom, with the 7 random Countryside map tiles on top of it.
- The starting position for the Mage Knight is any space adjacent to the Red City.
- Cities: The Red City is Level 30. The White City is friendly.
- Unit offer: Due to increasing local awareness of the threat, add 2 cards to the Unit offer throughout whole scenario. Core tiles are already placed at the beginning of the scenario, so Elite Units are available in the offer.
- Dummy Player: There is one standard Dummy player.

Special Rules

- Unless otherwise specified, all rules are the same as Solo Conquest, including Tactic cards.

- Restrictions for map tile placement when exploring do not apply in this scenario (Rulebook, Movement, 5.e). However, all explored map tiles must be placed within a wedge map shape.
- A common enemy: All Keeps and Mage Towers are friendly in this scenario. Therefore, you can stop at them to recruit Units, purchase spells, or use the "Defend your homes" special rule. No Shield tokens are placed on Keeps or Mage Towers, so there is no hand limit increases from Keeps.
- Chased: Whenever you explore a new map tile, calculate the distance to the Red City by counting the number of map tiles from the one you are exploring to the Red City map tile (always the shortest way). Subtract this number from the number of red crystals on the Red City card and roll as many mana dice as the resulting number, with a minimum of 1 die. For example, upon exploring the first Core map tile, the distance will be 1, so you roll 4 mana dice. If you score at least one red die result, then a drake has found you: draw a Draconum enemy token. When this happens, you must either end your movement and fight the Draconum where you are, or use the special rule "Defend your homes" (see below). You do not gain any reputation from defeating these chasing drakes.
- Defend your homes: If there is an inhabited location (Village, Monastery, Keep, or Mage Tower) on a newly-explored map tile when a drake finds you (see special rule "Chased") and you have remaining move

points to reach it, you can spend them to move to that location. The drake follows you, and you fight it there. If you do so, lose 1 Reputation (locals will not be happy to see you coming with a dragon on your tail), but you can use a Unit from the Unit offer to aid you in the combat for free even if you do not have free command tokens. The Unit must be one that can be recruited in that particular location. You cannot assign damage to that Unit, and site fortifications (Keeps and Mage Towers) do not have any effect in the combat. Right after the combat, return the Unit to the Unit offer. If you are already standing on an inhabited location when exploring the new tile, then you can use this special rule without spending

additional move points. However, you cannot use the rule to reach a different inhabited location on the map tile from which you are exploring, as this would be moving backwards (running to face the drake, rather than fleeing from it).

Scenario End

If you enter the capital (White City, friendly) within the time limit of the scenario, you win and the scenario ends immediately. Otherwise, it becomes too late to stop the invasion and you lose.

Scoring

Take your Fame as the base and apply standard

Achievements scoring, except "The Greatest Beating" and "The Greatest Conqueror". No titles are awarded. Do not apply the Cooperative or Solo Scenario bonuses found on the reverse side of the scoring card. Instead:

- Score 1 point for each card remaining in your Deed deck.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.
- Score 40 points for reaching the capital.

DRAKES!: 3) A STEEP COUNTERATTACK

- Length: Five rounds (3 nights and 2 days)
- Purpose: Reach Zamora, the Red City, up the hills through rough terrain and defeat it before the White City falls to the Draconum army.

Down in the valley, the last rays of the sunset reflect on the lake below and show to your tired eyes the glimmering lights of the white towers of the capital, displaying the king's flag. Its proud walls, nearly two hundred feet high and thick enough so that four men can walk together on the top with extended arms, stood defiantly as if knowing that no army has ever conquered the city before. Suddenly the light changes and you see with horror a great ball of fire falling upon the highest tower, which collapses in ruins raising a column of black smoke.

You wake, bathed in cold sweat, with a stifled cry of anguish. You are resting on a soft, feather bed in a comfortable white room with wide open windows looking above the lake, when a voice breaks the silence: "Stay calm, mage knight. You are now safe in the White City, and under my care." The voice has been spoken by a thin man, with funny and intelligent eyes, who stares at you with a slightly concerned, but confident look.

"How long have I been asleep?" you ask.

"A full night and part of a morning, sir," replies the man, in a warm tone.

With a flash of pain, you try to get up, screaming "I must speak to the king immediately!", but the man stops you, telling you that he is the king's personal physician and that he already knows about the dark news you brought in. You are to meet with the king again in the chamber of State, as soon as you are recovered.

"Sir," continues the physician "you will now eat and get ready to meet with the king, if it pleases you."

An hour later you are escorted into the chamber of State, a richly decorated room with flags and tapestries showing battle scenes. The king and his advisors are conferring over a map of the region spread on a marble plinth in the center of the room. "Welcome, mage knight," says the king. "Your help has been critical for the realm to mobilize its defenses against this threat. Without you we would be lost now. Please join us and tell us all details you remember about what you saw in the Red City."

For a long time you discuss your mission with the king and the generals. Scouts sent out since your arrival have reported a large army of orcs and drakes coming down the valley through the wide road, burning farms and crops on their way. Some voices say to gather the army and meet them to take the battle out of the city, but chief commander Karnos speaks against it. "We do not stand any chance against dragons in open battlefield," he says.

"Then you suggest to close up behind city walls and

wait?" asks the king.

"Yes and no," answers the old general. "I say we attack them, but not in the open, and not this army." Now everyone listens intently to the genial commander. "Let's send a small, elite force up the hills, avoiding the road, and attack the Red City while it is empty. We know that some dragons have been left there. Let's take them by surprise and force them to split the army."

"Good, it might work," says the king, "but I need you leading the defense of the city, and our charge when they retreat. Who will lead such a force? Our generals have not seen the Red City's defenses."

All advisers become silent now. "I will, milord," you will yourself say. "I have been there and can be of help."

The chief commander looks at you with severe eyes. "Can you be ready to leave tonight? I will gather your elite forces."

"Yes," you say, "tonight we launch the counterattack!"

Setup

- Map Shape: Custom to wedge
 - Countryside tiles: 4+
 - Core city tiles: 2 (Red City and White City)
 - Core non-city tiles: 5
 - The Portal map tile is not used in this scenario. The starting map tile is the White City tile, plus two random Countryside tiles oriented per map tile numbers.
 - Countryside tiles can be placed in the first three rows, always within an open map shape up to three columns wide. Restrictions for map tile placement when exploring do not apply when placing Countryside tiles (Rulebook, Movement, 5.e).
 - The Red City tile is shuffled in with the Core non-city tiles. Only Core map tiles can be placed starting in the fourth row. A wedge map shape begins with the first Core map tile placed. All remaining core map tiles must be placed within this wedge map shape. Core map tiles can be placed on the coastline, or adjacent to one or several other map tiles.
 - The starting position for the Mage Knight is in the White City.
 - Cities: The Red City is Level 30. The White City is friendly. Once you leave it, you cannot enter it again. You can use all the benefits of the White City when in or adjacent to it, including an increased hand size limit, but take into account you do not have any Shield tokens on the city.
 - Unit offer: Due the state of war, add 2 cards to the Unit offer throughout whole scenario. Core tiles are already placed at the beginning of the scenario, so Elite Units are available in the offer.
 - Dummy Player: There is one standard Dummy player.
- ### Special Rules
- Unless otherwise specified, all rules are the same as

Solo Conquest, including Tactic cards.

- Sneak on snakes: you are leaving the capital by night in small numbers, covering your action from the ears and eyes of the Draconum. During the first Night Round, at the end of your turn you may discard a non-wound card from your hand to reduce by 1 the number of cards drawn and discarded by the Dummy Player in their next turn. This is done before the Dummy Player checks for crystals in the inventory, and can only be done once per turn.
- Smoking Ruins: Every time a Ruins location is shown on a map tile, apply Night rules for it, no matter if it is night or day. Ruins can only be revealed by a Mage Knight entering them. Whenever a Ruins token is revealed, replace any white (City) or grey (Keep) enemy token with a Draconum enemy token instead.
- Call of the dragon: Female drakes and their eggs are left in the Red City, and their call will not be ignored. Upon the first assault on the City, reveal all Core map tiles that are not explored yet, in the closest possible position to the City. Place all corresponding tokens and reveal all remaining Ruins on the map. For every unchallenged Draconum on the map (either in Ruins or as a rampaging enemy), add 1 Draconum enemy token to City defenses and removing them from the map. Mark the Ruins that sent a Draconum to the City with a **red** crystal.
- Close-quarter fight: When revealing the City garrison, replace each of the city enemy tokens (white) with a Draconum enemy token, and each of the non-city enemy tokens (anything non-white) with a Marauding Orc enemy token. Do not apply site fortifications to any of the Draconum enemy tokens (they are only fortified if the ability is printed on the token). Marauding Orcs can benefit from site fortifications normally

Scenario End

If you defeat the Red City within the time limit of the scenario, before the White City falls, then you win. Otherwise, you lose. Once the Red City has fallen, you can play one last turn, unless End of the Round has been called.

Scoring

Take your Fame as the base and apply standard Achievements scoring, except no titles are awarded. Do not apply the Cooperative or Solo Scenario bonuses found on the reverse side of the scoring card. Instead:

- Score 1 point for each card remaining in your Deed deck.
- Score 1 point for each card in the Dummy player's Deed deck (that was not yet flipped this Round).
- If the End of the Round was not announced yet in your last Round, score an additional 5 points.
- Score 40 points for conquering the Red City.
