Carcassonne

Under the Big Top

This expansion can only be played with the Carcassonne base game, and the different elements can be used separately or all together. This expansion may also be combined with other Carcassonne expansions.

COMPONENTS

- **20 Landscape tiles** (marked with a  symbol, to help when sorting the tiles)

including: **12 Tent Tiles** with 1 Tent space on each

8 Acrobat Tiles with 2 Acrobat spaces each

- **16 Animal Tokens**

1x Elephant (7 points), 2x Tiger (6 points), 3x Bear (5 points),

5x Seal (4 points), 4x Monkey (3 points), 1x Flea (1 point)

Back side

- **1 Circus Tent figure**

- **6 Ringmaster figures**

SETUP

Mix the **20 new Landscape tiles** with the tiles from the base game. Place the **Animal Tokens** on the table with the Animal side face down and mix them. Keep them, along with the **Circus Tent**, to the side of the play area. Finally, give each player a **Ringmaster** figure in their player color.

TENT TILES, THE CIRCUS TENT, AND ANIMAL TOKENS

1. Placing a tile

If a Tent Tile is drawn, it is placed according to the normal Carcassonne rules.

Special rules: When the **first** Tent Tile comes into play, place 1 random Animal Token face down on the Tent space, and place the Circus Tent on top of the token. For the rest of the game, you only move the Circus Tent to a newly-placed Tent Tile during the step **"3. Scoring a Feature"** (see next page).

2. Deploying a follower

When placing a **Tent Tile**, you may, as usual, place a meeple on the tile as a knight, thief or farmer, but a meeple is never placed on the Tent space itself.

Red places the **first** Tent Tile of the game, and decides to place a meeple on the road. He then places a face down Animal Token on the Tent space, and finally places the Circus Tent on top of the token.

3. Scoring a feature

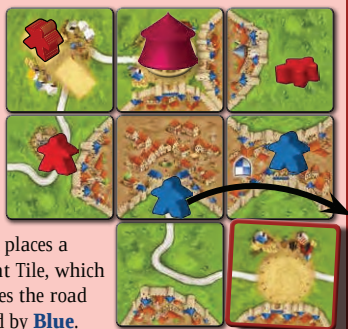

Whenever another Tent Tile is placed during the course of the game, the following steps are performed:

1.) If the placement of the tile triggers a scoring, complete that scoring first (and return any meeples involved in the scoring back to their owners' supply).

2.) With the placement of the **new** Tent Tile, a circus scoring is triggered on the tile where the Circus Tent **currently** stands, as follows:

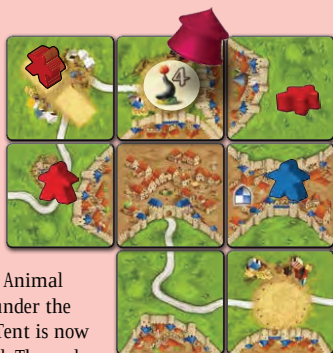

Reveal the Animal Token under the Circus Tent. **All** players having meeples on that tile, as well as the 8 tiles surrounding that tile, will now score points. **Each** of these meeples scores as many points as is shown on the revealed Animal Token.

Note: Acrobats and Ringmasters (see the following pages) are also meeples, and will therefore score points in a circus scoring as well, if they are in the vicinity of the Circus Tent.

1.) **Red** places a new Tent Tile, which completes the road occupied by **Blue**.

Blue scores 3 points and returns his meeple to his supply.

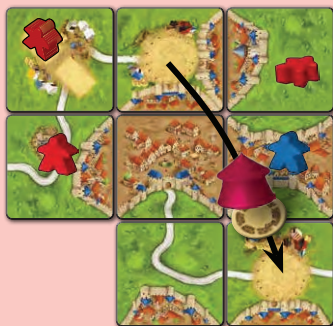

2.) The Animal Token under the Circus Tent is now revealed. The seal has a value of 4. Therefore, **Red** scores 12 points for his 3 meeples surrounding the Circus Tent, and **Blue** scores 4 points for his 1 meeple.

Important: All meeples **remain** on their tiles; a circus scoring does not cause any meeples to be returned to the supply.

3.) After the circus scoring, remove the scored Animal Token from the game. Finally, draw a new Animal Token and place it face down on the newly-placed Tent Tile, and then place the Circus Tent on top of the token.

3.) After scoring, you draw a new Animal Token and place it face down on the Tent space of the newly-placed Tent Tile. You then place the Circus Tent on the token.

Game End

Important: At the end of the game, you must first perform a final circus scoring before proceeding with the rest of the normal final scoring.

Additional clarification for the Tent Tiles:

The Tent space ends all roads that lead into it, and also separates the fields from each other.

ACROBAT TILES

1. Placing a tile

If an Acrobat Tile is drawn, it is placed according to the normal game rules.

2. Deploying a follower

When placing an **Acrobat Tile**, you may, as usual, place a meeple on the tile as a thief or farmer.

There is also an additional option: you may also place a meeple as an **acrobat** on one of the two Acrobat spaces on the tile.

On a later turn, if you place a tile adjacent to an Acrobat Tile (including diagonally), you may place a meeple as an acrobat on the Acrobat Tile, instead of placing on the newly-placed tile.

1.) Red places an Acrobat Tile and places his meeple on an Acrobat space.

2.) Later, Blue places a tile next to the Acrobat Tile and places his meeple next to Red's.

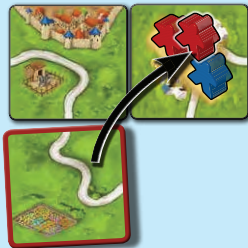

The first two meeples placed on a tile as acrobats are placed on the acrobat spaces. If a third meeple is placed, it is balanced on the shoulders of the first two meeples. The acrobat pyramid is then complete, and no further meeples may be added to it.

The colors of the individual acrobats in a pyramid do not matter. The pyramid may contain meeples of the same or different colors.

If you place an Acrobat tile adjacent to another Acrobat tile, you may, of course, choose on which of the tiles to place a meeple as an acrobat.

3.) Still later, **Red** places a tile diagonally adjacent to the Acrobat tile, and completes the acrobat pyramid with his meeple.

3. Scoring a feature

Once a pyramid consists of three acrobats, you are allowed to score it. However, you do not have to score the pyramid as soon as it is complete; you may choose to let the acrobats demonstrate their skill for a while.

If, during the step “**2. Deploying a follower**” on a later turn, you choose not to place a meeple on a newly-placed tile, you may instead score **any** completed pyramid. **Each acrobat** in the pyramid is worth **5 points**. All players involved in the scoring then return their meeples to their supply.

Other Rules:

- You may begin a new pyramid on an Acrobat tile that has already been scored earlier.
- You may score a pyramid even if you do not have any acrobats of your color in that pyramid.

Game End

At the end of the game, each acrobat remaining on a pyramid will score 5 points, even if that pyramid has not been completed.

Additional clarification for the Acrobat Tiles:

The Acrobat spaces end all roads that lead into it, and also separate the fields from each other.

Later in the game, **Red** places a tile and decides to score the above pyramid instead of placing a meeple on the newly-placed tile. **Red** scores 10 points, and **Blue** scores 5 points.

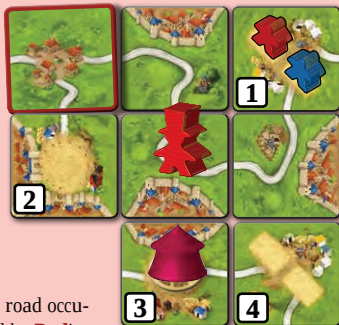

2. Deploying a follower

You may place your **Ringmaster** instead of a normal meeple on a road, city, monastery or field. In any of these situations the Ringmaster counts as a normal meeple. However, you may **not** place your Ringmaster as an acrobat.

3. Scoring a feature

If you have completed a feature with your Ringmaster, you will receive points normally, as in the rules of the base game.

In addition, you then receive **2 points** for **each Tent Tile and Acrobat Tile** that is directly adjacent (including diagonally) to your Ringmaster. Even if your Ringmaster does not score points from the feature being scored (i.e., if another player has majority in the completed feature), you still receive your Ringmaster points. It does not matter if the Circus Tent or any acrobats stand on the tiles; only the tiles themselves are considered in the Ringmaster scoring. After the scoring, return your Ringmaster to your supply as usual.

The road occupied by **Red's** Ringmaster is completed with the tile shown above. For this he scores **5 points** as usual. In addition, he receives **8 points** for the 4 Tent and Acrobat Tiles surrounding his Ringmaster. In total, **Red** scores **13 points**.

Game End

At the end of the game, your Ringmaster will score points as usual for a normal meeple; that is, for a farmer in a field, or if he is standing on an incomplete feature.

Rules for playing with other expansions:

The information on this page is provided in case you have questions related to combining this expansion with others. If you are not doing that, you may simply ignore this page.

TENT TILES, THE CIRCUS TENT, AND ANIMAL TOKENS

All of these figures are eligible for scoring with the Circus Tent:

- Normal meeple
- Abbot (Base game)
- Big meeple (Exp. #1)
- Wagon (Exp. #5)
- Mayor (Exp. #5)
- Ringmaster (Exp. #10)

The following figures are NOT eligible for scoring with the Circus Tent:

- Builder (Exp. #2)
- Pig (Exp. #2)
- Barn (Exp. #5)
- Shepherd (Exp. #9)

Exp. #8: You may build a bridge according to the normal rules on a Tent Tile with or without a Circus Tent. If your meeple is in a Castle, he receives points for a Circus scoring if at least part of the Castle lies within the eligible scoring area.

ACROBAT TILES and ACROBATS

Important: Only **normal meeples** may be placed in an acrobat pyramid. Neither big meeple (Exp. #1) nor any other figures are allowed in the pyramid.

Exp. #3: If the Fairy is next to an acrobat pyramid, she is considered to be next to all of the **acrobats** in that pyramid. Players receive 1 point for **each** of their meeples in a pyramid if the Fairy is next to them at the beginning of their turn. You may use a Magic Portal to move one of your meeples to a Pyramid.

Exp. #4: If you take a meeple from a pyramid when using a Tower's action, you may choose to remove any meeple in that pyramid, regardless if it is in the bottom or top level of the pyramid.

Exp. #8: You may only build a Bridge on an Acrobat tile if there are no acrobats present on it at the time. Once a Bridge has been built on an Acrobat tile, no acrobats may be placed on it. An acrobat pyramid is not considered as one of the "structures" that triggers the scoring of a Castle.

RINGMASTER

Important: Your Ringmaster counts as a normal meeple, and functions the same as a normal meeple in all expansions.

Exp. #4: You may place a Ringmaster at the top of a Tower to complete it (even though he may be a little wobbly there!)

Exp. #5: If you use your Ringmaster as a farmer, you will receive his Ringmaster points in any case (regardless if a Barn was used, or if fields have been connected).
